

Focused on Industrial Automation, Industry 4.0, HashStudioz IoT RS-485 Gateway: Complete Solution for Secure & Efficient Data Transmission

Today, when Industry 4.0 is becoming the de-facto standard for industrial automation & where data reigns supreme, Industrial IoT (IIoT) gateways have emerged as the unsung heroes, acting as powerful intermediaries, bridging the gap between industrial equipment & the digital world.

With the intent of delivering an end-to-end data capturing, monitoring, & control solution for machines, HashStudioz Technologies Inc. launched its IoT/IIoT RS-485 Gateway. This all-in-one solution is designed to transform the way you connect, monitor & manage your diverse array of connected devices, sensors, & equipment.

The IoT RS-485 Gateway has a number of features that make it a valuable tool for businesses. It is equipped with an electrostatic shielding feature that protects the device from electromagnetic interference, ensuring reliable & secure communication. It also supports heartbeat packet functionality, which periodically sends a signal to the server to ensure that the device is still connected and functioning correctly.

Key components are RS-232, RS-485, DC Barrel Jack Connector, Ethernet interface, WiFi antenna, and operating voltages between 5v-60v DC. Furthermore, it has a dual-core ARM processor, a hard reset button & an IP41-rated EMI proof Metal casing. It also supports WiFi 802.11b/g/n and a dual-core ARM controller, paired with a 4G-LTE Cat-1 Industrial Modem inbuilt. These components provide a reliable & robust communication platform for industrial & commercial applications.

The Modbus RS485 to MQTT gateway drives seamless data transmission through an interface to the dashboard service. It utilizes data lines to extract the data & transmit the packet over MQTT to the dashboard.

The IoT/IIoT RS-485 Gateway finds applications in manufacturing, energy, transportation & smart cities, offering benefits such as improved efficiency, cost reduction & enhanced product quality. It ensures reliable & secure communication, real-time data exchange & seamless data transmission. In manufacturing, it enables monitoring & control of equipment, reducing manufacturing time by 15% & costs by 10%. The gateway is also valuable for monitoring & controlling vehicles & optimizing smart city infrastructure like traffic lights, streetlights & water meters, thereby enhancing city services and citizens' quality of life.

According to the company, the launch of the IoT

Gateway marks a significant milestone. HashStudioz offers turnkey IoT solutions that efficiently solve customers' connectivity & remote device management challenges. Moreover, they provide expert technical support to ensure a successful deployment.

HashStudioz Introduces IoT RS-485 Gateway

Remote Configurability:

- Default settings built-in.
- Error-clear mechanism.
- User-configurable remotely.

Industrial Applicability:

- IP43 casing.
- EMI & EMC-proof metal case.
- IIoT 4G LTE enabled.

Multiple Slave Support:

- Up to 5 supported slaves.
- Each slave can have different configurations.

Features: WiFi, BLE, GPS, REST, Web Socket, OTA, FOTA

For More Information  +91-95000 69295  info@hashstudioz.com 

Device Specifications:

Hardware Architecture: 32-Bit, ARM, Multi-Core, Qualcomm SoC for LTE-communication.

Industrial Connectivity: Modbus ASCII, Modbus RTU, Modbus TCP, OPC UA.

I/O Interfaces: Upto 10 Digital Interfaces (30v tolerant)

Security: SSL/TLS, Other

Mounting / Form Factor: DIN Rail

Environmental: Commercial (0 to 70°C), Extended, Industrial (-40 to 85°C)

Power: 24 Volt DC (24VDC), DC, Terminal Block, Other

Availability: APAC, Australia, Canada, China, EMEA, EU, Japan, Korea, LATAM, New Zealand, UK, USA, Other.
