Indian Home Security Camera Shipments Rise By 48%

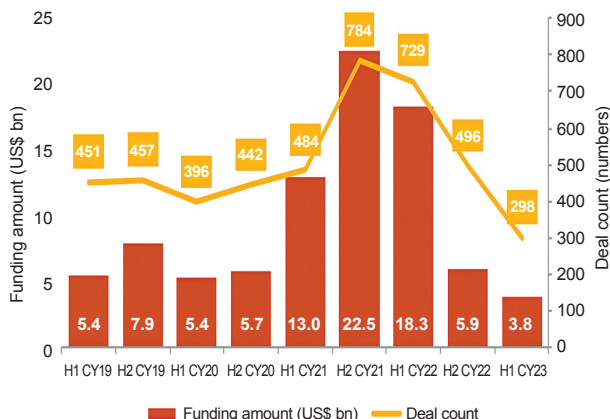

Indian home security camera shipments grew 48% year-on-year (Y-o-Y) as offices reopened, indicating a higher demand for home surveillance products. The average selling price of smart security cameras decreased due to a decline in component costs, making them more affordable. Chinese brands faced strong competition in the market, with CP Plus by Aditya Infotech dominating with a 45% market share and experiencing significant growth. Xiaomi and EZVIZ faced shipment declines due to inventory levels and aggressive pricing by competitors.

Startup Funding Records 36% Decline In H1 CY23

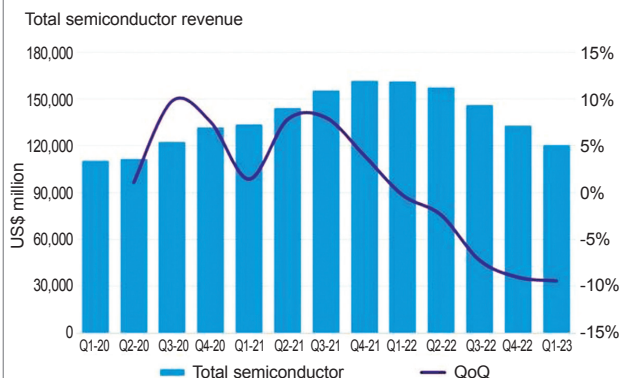

Investment in Indian startups fell by 36% between January 2023 and June 2023, compared to the previous six-month period, to \$3.8 billion across 298 deals, making this the lowest six-month drop in funding in the past four years, reported PwC. The report stated the slowdown in startup funding was due to an increase in due diligence being carried out by investors before making investments to ensure that the startups have a robust corporate governance framework.

Semiconductor Market Falls For Fifth Straight Quarter

The semiconductor market declined for the fifth consecutive quarter, marking the longest decline since tracking began in 2002, reported research group Omdia. In 1Q23, the chip market revenue settled at \$120.5 billion, a 9% decrease from 4Q22. The memory market declined to 44%, and the microprocessor unit (MPU) market fell to 65% of its size in 1Q22. However, the market has witnessed a demand boost with generative AI benefiting companies like NVIDIA, which has reported strong revenue growth.
