

ries. The partnership will enhance Harwin's customer support capabilities and enable TME to offer its Eastern Europe clients in the industrial automation and avionics sectors a broader range of products.

Foxconn reports 13.8% Y-o-Y drop in Q2 revenue

Foxconn's second-quarter revenue fell by 13.8% compared to the previous year. Despite the drop, the company predicted a bright outlook for the third quarter, with expectations of increased revenue growth, stating that the second half of the year was a peak season for operations. Revenue for smart consumer electronics products, including smartphones, decreased in the second quarter. The company expects the growth rate in the third quarter to be approximately at par with the pre-pandemic period. Foxconn will report its second-quarter earnings on August 14.

Samsung Electronics to report 96% drop in June quarterly profit

Samsung Electronics is projected to experience a substantial decline in its June quarter profit, with a staggering 96% year-on-year drop, the lowest for any quarter in over 14 years for Samsung. The chip division, traditionally Samsung's most profitable sector, is expected to report quarterly losses due to the continuous decline in memory chip prices and reductions in inventory values. However, the rate of price decline has slowed compared to previous quarters due to supply cuts. Samsung aims to bolster its market share in AI by focusing on high bandwidth memory (HBM) and chip contract manufacturing.

LG aims to double sales by 2030 with \$39.5B investment

LG Electronics plans to invest \$39.5 billion to reach \$79 billion in sales by 2030 by transforming from a consumer home electronics-focused company into a platform-based tech company. It plans to strengthen its service platforms for home appliances, expand B2B units, and pursue growth in EV charging and digital healthcare by making significant acquisitions in emerging sectors such as robotics, AI, EV components etc. It intends to offer webOS as a service platform provider and develop a home energy platform integrating HVAC, ESS, and EV chargers. It is also establishing a venture capital unit to

support startups and is partnering with its internal startup incubator for digital healthcare.

Siemens to spend \$1B on factory infra in Germany amid China-West tensions

Siemens plans to spend 1 billion euros (\$1.12 billion) on new factories and facilities in Germany, including a factory for electronic components and machine tool controls. The company said the proposed investment would increase production capacity by 60% by 2029 but not increase employability. The company would also build a new semiconductor factory in Forchheim and establish a training centre for Siemens Healthineers in Erlangen. Despite Berlin's cautionary strategy paper about the economic and security risks of investing in China, Siemens' global investment plan also includes expanding its digital factory in Chengdu and building a new R&D centre in Shenzhen.

Micron reports \$1.9B loss in latest quarterly report

Micron Technology reported a net loss of \$1.9 billion in its latest quarterly earnings report with a revenue of \$3.7 billion, less than half the revenue from a year ago. Government sanctions imposed on Micron's memory products sold in China and a decline in NAND and DRAM demand have created significant headwinds for the company. The revenues for the company's fourth fiscal quarter are expected to reflect a negative 12.5% gross margin. Micron's revenues for DRAM products accounted for 71% of total revenue, while NAND made up 27% of total revenue. The company expects year-on-year bit supply growth to be negatively impacted for DRAM and few NAND bits to be produced in 2023 compared to 2022.

Renesas invests \$2B in 10-year SiC supply agreement with Wolfspeed

Renesas has signed a 10-year supply agreement worth \$2 billion for silicon carbide (SiC) wafers with Wolfspeed. Renesas has made the \$2 billion deposit for the 150mm and 200mm silicon carbide wafers supply. The company plans to scale silicon carbide power semiconductors production starting in 2025. Silicon carbide devices offer higher energy efficiency, greater power density, and lower system costs than conventional silicon power semiconductors. Wolfspeed's ongoing capacity construction projects, including the world's largest silicon carbide materials factory, will be supported by Renesas' \$2 billion deposit.

government to establish a factory in India for electric cars starting at ₹2 million. The discussions involve seeking incentives and tax benefits from the government. Tesla aims to build its own supply chain ecosystem in India. Tesla has been holding meetings with industry executives in India to bring its own suppliers to the country. The discussions reflect the growing interest of international automakers in India's electric vehicle market, which the government is actively promoting through initiatives and incentives.

Chinese TCL, Resojet to set up \$2.25 billion washing machine manufacturing unit in Telangana

Chinese consumer electronics firm TCL plans to establish its first overseas manufacturing unit for washing machines in Telangana, India. The proposed facility will require an investment of ₹2.25 billion. TCL will form a joint venture with home-grown Resojet for this manufacturing unit in E-City, Raviryal, near Hyderabad. The project is expected to generate jobs for over 500 people

in the first phase. The facility may expand to manufacture other consumer appliances such as refrigerators and dishwashers. The Minister of Industries and IT, K.T. Rama Rao, invited TCL's CEO and team to visit Telangana to witness the enabling infrastructure and ecosystem in the state.

ICEA establishes task force to raise Indo-US electronics trade to \$100B by 2033

The India Cellular and Electronics Association (ICEA) has established
