work history, the roles performed, the projects worked on, and the challenges faced.

If you are hiring for roles requiring industry-specific knowledge, leadership skills, or result-driven roles, then this is the way to go. Here you would want to assess their track record and the practical application of their skills in real-world scenarios.

You would want to know their ability to handle complex tasks, their working style in dynamic environments, and their ability to deliver results.

This may potentially overlook candidates who are early in their careers but may have exceptional potential or transferable skills from different industries. But as long as you are aware of this limitation, you can make sure you are covering for it.

I always recommend maintaining a balance between qualifications and experience by considering both factors when assessing candidates accordingly. It just helps identify people who not only have the necessary skills, knowledge, and experience but also have potential, adaptability, and cultural fit.

Build special-purpose teams

When I worked with LG Electronics, we regularly used the concept of Tear Down Reengineering (TDR) teams. These teams functioned much like composite units in the army.

The beauty of special-purpose teams is that they make experimentation feasible. Small, focused project teams with cross-functional members, autonomy, latitude, and access to resources can do wonders.

Having the ability to change directions quickly and reorganise in times of disruption is something you can bet on with this structure. For most startups, adaptability is a crucial trait. Building special-purpose teams significantly increases this trait due to the resizable and modular team structure.

The point is...

I have often heard many people say that having a team is an important factor in startup success. However, the reality is the team doesn't come first. There are quite a few things that take priority to prove your product or idea, and eventually having a team becomes a necessity. That's when having a team becomes important. When that happens, there are several ways to approach that aspect. Most of them I have covered in this article.

But until that time comes, focus on building assets that are more important than this.

PS. if you'd like to grab a short checklist of those 15 assets, it's available here for download: https://bit.ly/15_Assets **EFY**
