A product is primarily judged by its appearance. Even before the customer uses the product, they form an opinion based on its looks. After aesthetics, the next important aspect of a product is its usability. A product is rendered useless if it is difficult to use. This difficulty arises from complex controls and confusing signals.

A product that is challenging to use has a high chance of being misused. Complicated controls also lead to mistakes, resulting in early product failure. In our first article of this series, we discussed affordances and signifiers. Affordances are product features designed to allow users to interact with the product. Signifiers are cues that guide users to the affordances
