

Electrifying Shift In AUTOMOTIVE DISPLAY EVOLUTION

The future of automotive displays depends on heads-up displays advancements, the promise of immersive 3D experiences, and the unexpected regions leading these groundbreaking innovations

The author, **DR MIGUEL EL GUENDY**, is a Technology Analyst at IDTechEx specialising in automotive displays. He has completed his PhD at the University of Cambridge where he specialised in the use of holographic displays in augmented reality. He also holds an MRes degree in Photonic Engineering from the University of Cambridge

Automotive displays encompass the screens and interfaces within our vehicles. As cars continue to advance in intelligence and functionality, there is an increasing focus on improving these displays to provide a more immersive yet non-distracting experience for the driver. A prime example of innovation in this field is the heads-up display. This cutting-edge feature aims to replace traditional dashboards, prioritising road safety and keeping drivers' attention undivided.

The field of automotive displays offers a captivating blend of technology and aesthetics. While these displays are prominently featured in passenger vehicles and large cargo vans, our examination primarily focuses on passenger and large commercial vehicles, excluding buses, trucks, and trains.

Modern vehicles boast a variety of

displays, each designed for specific functions. Cars typically come equipped with a dashboard display positioned for the driver's convenience, paired with a central informational panel between the driver and the co-passenger. Such traditional configurations continue to dominate the majority of contemporary vehicles.

As autonomous driving becomes an impending reality, there is a noticeable shift in priorities. While safety remains paramount, enhancing the passenger's experience has gained importance. With the transition from manual to autonomous vehicles, where every occupant becomes a passenger, entertainment takes centre stage. This shift prompts the industry to envision and develop expansive, interactive displays to elevate the passenger experience.
