

ing challenges faced by those who had timely applied for licenses but were experiencing delays in processing. This extension was a response to the Central Drugs Standard Control Organisation's (CDSCO) directive setting October 1 as the deadline for regulating 'Class C' and 'Class D' medical devices. The extension allows them to continue importing or manufacturing these devices until a decision on their license application is made or six months from the circular's issuance, whichever comes earlier.

MeitY, Si2 Microsystems to set up silicon photonics research centre at IIT Madras

MeitY and Si2 Microsystems will jointly sponsor the five-year project to set up Silicon Photonics Research Centre of Excellence, Centre for Programmable Photonic Integrated Circuits and Systems (Silicon Photonics CoE-CPPICS) at the Indian Institute of Technology, Madras. The two parties aim to support self-sufficiency and drive product commercialisation in the photonic integrated circuit segment in India, with an undisclosed substantial budget. The CoE will receive support from Intel, Keysight Technologies USA, and SiTerra Malaysia.

Lumax Industries launches new plant in Pune

Automotive lighting solutions provider Lumax Industries has announced the initiation of commercial operations at its new production site near Chakan in Pune. The company is preparing to boost its production footprint in Western India, spurred by a solid stream of orders from major original equipment manufacturers (OEMs) such as Tata Motors and Mahindra & Mahindra, among others. Before this development, the company had enhanced its production capacity at its Sanand facility.

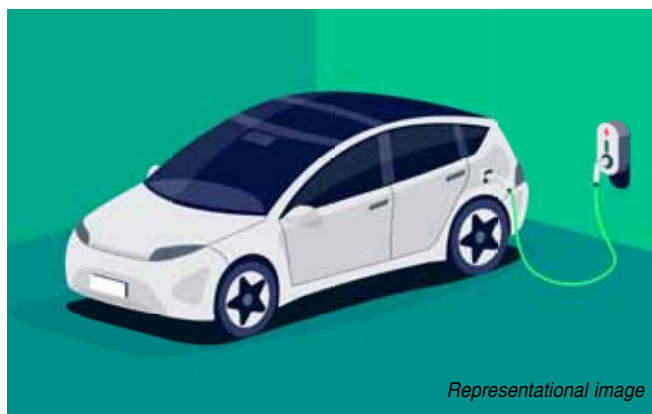

TATA Power expands EV charging network by 22% QoQ

Tata Power increased its number of charging stations by 22% in the

quarter ending September 2023, intensifying efforts to enhance its charging infrastructure throughout India. Currently, Tata Power boasts 4932 public and private charging points, with 561 new additions in the September quarter. Additionally, they introduced 11,529 new home charging points in the second quarter of the fiscal year, bringing the total to 61,959.

Real estate developers invest in EV charger sites in residential projects

Developers in India are increasingly incorporating electric vehicle chargers into new construction of parking

areas to enhance property appeal and market value, addressing the challenge of expanding the charging infrastructure in line with the rapid growth in EV sales. Real estate developers like Sobha, Prestige, Mahindra Lifespace, Kolte-Patil, Brigade, and DLF are capitalising on the opportunity, anticipating that properties with EV chargers will attract customers willing to pay more, similar to the allure of amenities like swimming pools.

Drone startup UrbanMatrix secures ₹60 million funding

UrbanMatrix Technologies has secured ₹60 million from investors to fuel its expansion plans. The company intends to utilise the funds for product development, increasing its team size, and entering new markets. This capital injection comes

from a Pre-series A funding round spearheaded by Inflection Point Ventures. The startup creates industrial drones and drone software for various applications such as surveying, surveillance, agriculture, AI-powered inspections, and defense. It operates out of a 278.7 square metres (3000 square feet) commercial facility with a dedicated production area.

EP-incubated startup UnivLabs achieves ₹200M valuation

Electropreneur Park (EP)-incubated health-tech startup UnivLabs Technologies achieved a valuation of ₹2 billion and initiated an investor

buyback from EP incubator stakeholders, resulting in a 36X return on EP's investment. EP made a formal exit announcement during the inauguration of the Apiary CoE incubation facility. UnivLabs Technologies, under EP's

guidance, expanded its footprint to six countries and provided innovative solutions to over 2000 hospitals in India and abroad. The company applied for 11 patents, with two already granted.

AIM opens applications for ATL Marathon innovation challenge 2023-24

The Atal Innovation Mission (AIM), in collaboration with the Ministry of Education, YuWaah, and UNICEF, has opened applications for the ATL Marathon 2023-24, a national-level technology innovation challenge for young students in India. This year's marathon theme is 'India's Seventy-Fifth Republic Day' with problem statements focusing on areas such as space, agriculture, inclusivity, disaster management, mobility, health, education, and skill development.
