Introducing nRF7002

Nordic's First Wi-Fi IC

The nRF7002 Wi-Fi 6 companion IC is a highly integrated IC designed to enable the integration of Wi-Fi 6 connectivity into a wide variety of applications. The IC provides a low power and cost-effective solution for adding the latest Wi-Fi 6 technology to products, allowing them to benefit from high speeds, improved range, and greater reliability offered by the latest Wi-Fi standard.

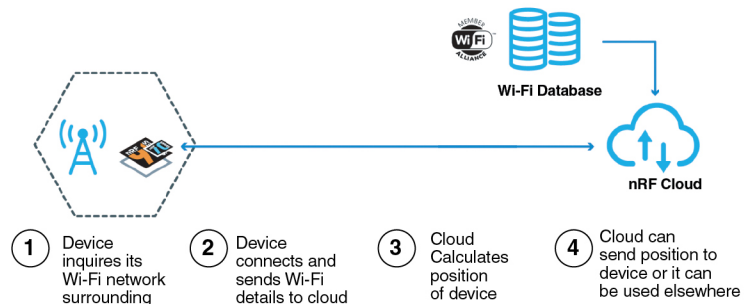

nRF7002 includes below features:

- 2.4 GHz and 5 GHz dual-band
- Low-power and secure Wi-Fi for the IoT
- Ideal coexistence with Bluetooth LE
- WPA3 Personal/Enterprise
- SPI / QSPI
- Wi-Fi 6 Station (STA)
- Complies with 802.11a/b/g/n/ac/ax
- 20 MHz channel bandwidth
- 64 QAM (MCS7), 86 Mbps PHY throughput
- BSS coloring
- Co-existence interfaces

Wi-Fi locationing

The nRF7002 is an ideal choice for implementing low-power Wi-Fi locationing with nRF Cloud Location Services and the nRF9160 SiP. It perfectly complements GPS-based or cell-based locationing by providing an accurate location indoors and in places with a high density of Wi-Fi access points.

Our offerings:

- ▶ Samples & EV Boards
- ▶ Technical support for designing
- ▶ RF testing of Customer Product

Millennium Semiconductors is an authorized distributor of Nordic Semiconductor
