PSRAM for V2X communication

Infineon Technologies, in collaboration with Autotalks, has introduced an automotive-grade pseudo static random access memory (PSRAM) for advanced vehicle-to-everything

communication (V2X) applications. The PSRAM, known as

HYPERRAM 3.0, utilises high-speed CMOS technology and features a self-refreshing dynamic random access memory (DRAM) with a HyperBus interface. Infineon claims that the PSRAM achieves an enhanced throughput of 800MBps through a 16-bit extended version of the HyperBus interface. The memory is designed for buffering data, storing audio, images, video, and supporting math and data-intensive operations. It internally manages the necessary refresh operations on the DRAM array, ensuring data integrity without requiring host intervention. The PSRAM is characterised by low power consumption, high performance, and a low pin-count design. It comes in a small form factor and fine-pitch ball grid array (FBGA) package, enabling compact designs on the printed circuit board.

AC panel surge protectors

Transtector has released a new line of outdoor AC panel surge protectors featuring high-capacity metal oxide varistor (MOV) technology. These surge protectors effectively

safeguard AC power networks and local AC equipment from transient surges and electromagnetic interference (EMI). The surge protectors are designed to meet the specific needs of the telecommunications industry, industrial facilities, and IT/data

centres. The line includes models for all common AC services, such as single-phase, split-phase, three-phase wye, and three-phase delta configurations. The surge protector comes in various models with capacities of 100kA, 200kA, or 300kA per phase. They are dual listed to meet UL 1449 Type 2 SPDs and UL 1283 EMI filter standards, ensuring safety and performance. The outdoor AC panel surge protectors are housed in durable NEMA 4X enclosures, making them suitable for outdoor use. Moreover, these AC panel surge protectors feature an operating temperature range of -40°F to +167°F.

65-watt fast charger

VingaJoy SPEED PRO CH-1040 is a 65-watt fast charger that boasts rapid charging capabilities and safety features. It prioritises safety with built-in protection against over-voltage,

short circuits, and overheating. The lightweight design enhances portability, making it ideal for travel. Manufactured in India, the charger offers exceptional charging capabilities and features multi-layer protection against short circuits. It is suitable for charging smartphones, power banks, and wireless headphones. Crafted from premium ABS material, the charger ensures durability and exhibits excellent resistance to heat, low temperatures, and chemicals. The Vingajoy SPEED PRO CH-1040

provides a reliable and long-lasting charging solution.

Gaming graphic card

Radeon RX 7600 graphics card from AMD has been released to target visual quality and performance for 1080p gaming, streaming, and content creation. The graphics card is specifically designed to deliver extraordinary experiences in 1080p gaming, providing an ideal upgrade option for gam-

ers. With support for 60+ frames per second (FPS) and high-fidelity streaming through AV1 technology, the card enables immersive gameplay and content creation. The company claims the graphics card delivers an average of 100+ FPS in top PC titles and esports games, showcasing improved AI performance and content creation capabilities. The AMD Radeon RX 7600 aims to cater to the needs of high-performance 1080p gaming, streaming, and content creation applications. With its competitive pricing at \$269, it offers a range of features such as AV1 encoding, the AMD Radiance Display Engine, and more, taking gaming and content creation projects to the next level. The card features AMD RDNA 3 architecture, improved streaming quality and performance, ultra-high definition encoding, increased content creation and AI performance, AMD Radiance Display Engine, AMD FidelityFX Super Resolution Technology, and is supported by AMD's Adrenalin Edition Application. It features 32 compute units, a game clock of 2.25GHz, a 128-bit memory interface, and 32MB Infinity Cache.
