Get ready to unlock the full potential of your smart home as we delve into the world of Matter and Samsung offerings for this emerging global standard

The author, **RAVINDRA B. SHET**, is Senior Director, Head of IoT Team, Samsung R&D Institute India Bangalore (SRIB)

**T**he future of smart home technology is evolving at an unprecedented pace, and Samsung is at the forefront of this revolution with its active leadership in the ground-breaking Matter standard. Designed to enhance interoperability and simplify the integration of smart devices, Matter is set to reshape the way we interact with our homes.

## How Matter works

Today there are about five billion ZigBee devices available in the market. Even though people have adopted ZigBee well, the number of markets in which the products are spreading are still low.

The Wi-Fi-based devices have overtaken the market.

ZigBee has well-defined ZCL cluster libraries. Standard data formats can be imagined as data structures. For example, whenever you want a government passport, you have various ways to provide your data to the government. If we leave it to people's imagination of an open format letter, we will have zillions of variations in the letter written with the needed data, and you can imagine the delays and ping-pong.

The best way adopted in all public offices is to have a form (or format), which is a template to provide the information STOP in a well-structured format to main-
