announced the partnership with Optiemus Electronics Limited (OEL) to strengthen its 'Make in India' journey. Notably, Xiaomi is set to begin the production of its first locally manufactured audio product at the OEL factory situated in Noida. The company mentioned in a statement that it is targeting a 50% increase in smartphone domestic value addition over the next two years. It is noteworthy that OEL also has a strategic partnership with Wistron Infocomm Manufacturing (India) for manufacturing electronics.

Log9 partners with Quantum Energy to unveil e-scooters

Bengaluru-based deep-tech and battery tech startup Log9 Materials has partnered with Hyderabad-based electric vehicle manufacturer Quantum Energy Ltd to unveil a new commercial electric two-wheeler (2W), Bzinesslite. The first 200 e-scooters will be deployed with Whizzy Logistics in Hyderabad for hyperlocal deliveries. These 2W EVs shall be catering to a wide variety of use cases, including e-commerce, food delivery, and courier services, among others, in the Indian last-mile logistics sector. The vehicle is powered by Log9's RapidX 2000 batteries. Log9 claims that these batteries are capable of charging the battery from zero to 80% within 12 minutes.

PMI Electro Mobility providing e-buses for use in Dharamshala

One of India's leading electric bus manufacturers and fleet operators, PMI Electro Mobility, recently said

that it has delivered 15 electric buses in Himachal Pradesh's Dharamshala. As per the deal, PMI Electro Mobility will provide 50 electric buses to Himachal Road Transport Corporation for Dharamshala and maintain them for a period of ten years. The company said that it will lead to an overall reduction of 14,000 tons of carbon-dioxide over the contract term. The state's Chief Minister Sukhvinder Singh flagged off the electric buses.

Indian e-scooter startup River EV secures another \$15 million in funding

In a recent update, Bengaluru-based electric vehicle startup River EV secured \$15 million in funding. The EV company mentioned in a statement that the newly raised fund will be used for manufacturing, delivery, and setting up of a dealership network. Led by Dubai's Al Futtaim Group, the all-equity funding round also saw participation from River's existing investors, including Lowercarbon Capital, Toyota Ventures, Maniv Mobility, and Trucks VC. With the latest funding, the EV company has secured a total of ₹2.31 billion to date. The startup has not yet begun the deliveries of its product. The e-scooter deliveries are likely to begin by August 2023.

Siemens acquires Mumbai-based Mass-Tech Controls' EV division

Siemens Limited recently announced the acquisition of the EV division of Mass-Tech Controls Private Limited. The company

signed the deal to acquire the division which is engaged in designing, engineering, and manufacturing various AC chargers and 30-300kW capacity DC chargers for various end applications for EVs. As the Centre's FAME-II policy and electric vehicle policies notified by various state governments look forward to an electrified future, and the company plans to tap the fast-growing demand for electric vehicle (EV) charging infrastructure in India, the company believes that the acquisition will help in the expansion of its local market presence while enabling the creation of an export hub in the country.

e-con Systems secures PE funding worth a billion rupees

Embedded vision products and solutions company e-con Systems has secured funding of one billion rupees (\$13 million) from US-based private equity company GR22 Holdings Inc. The PE company, headed by Radhakrishnan Gurusamy, has assets of nearly \$100 million, as mentioned in the company's press statement. The funding will be utilised for e-con Systems' growth plans, including investment in building contemporary and state-of-the-art facilities for imaging, autonomous mobile robots, autonomous shopping, and cellular and molecular imaging core laboratories. Ernst and Young acted as an exclusive advisor for e-con Systems on the transaction.

Uber unveils 'Uber Green' to electrify its services

As per various media reports, Uber, the US-based global ride-hailing platform, recently announced its entry into the world of electric vehicles in India. The company has come up with its 'Uber Green' offering to help users book EV cabs. It is learnt that the service is being started from June across three cities—Delhi, Mumbai, and Bengaluru. The NASDAQ-listed firm has signed partnership agreements with various EV companies, including those providing EV financing and charging infrastructure.
