

Setting Up FRONTEND Over BACKEND

In this continuation of his series on business asset management, the author delves into prioritising frontend assets over backend operations. His main take on the subject is that customers first engage with a brand at the frontend, making it the foundation for business success

There is a constant debate about what is easy in business and what is not.

For most people, the backend seems easier than the frontend, which is true. The backend is easy, while the frontend is challenging. This is because the backend is inherently limited, with limits to its reach. In the backend we know what needs to be done and what works. It involves several easy steps to prove, where most outcomes and scenarios are

finite and predictable.

Moreover, people involved in backend activities are usually limited. So, all the assets created in and for backend often make your balance sheet healthy. This is good for the bank but it can be less attractive to investors due to the lack of full resale value and high returns.

Comparatively, the frontend is more challenging, mainly because it is vast. While we may know what needs to be done, we wouldn't necessarily know if all
