

tion compared to previous products. The GRM series features Murata's thin layer forming technology and high-precision lamination process,

enabling the production of compact MLCCs with high performance. The MLCCs are suitable

for applications such as smartphone handsets, portable equipment, wearables, domestic appliances, servers, and IoT hardware, where high-capacitance components with minimal PCB footprint are required.

EMBEDDED

Processor for handheld gaming

AMD's Ryzen Z1 is a high-performance processor series suitable for handheld PC gaming consoles. These

processors are compatible with Windows 11 and other operating systems, allowing users to access a wide range

of applications and games. Designed specifically for gamers, the processors feature smart power management technology, enabling seamless gameplay and optimal application performance while maintaining excellent battery life. With up to 8 cores and 16 threads, the processors can provide impressive visuals and immersive gaming experiences through the efficiency of the Zen 4 architecture. The devices offer built-in graphics, allowing for smooth gameplay of graphically intensive modern games. The Ryzen Z1 series processors support USB4 for fast connectivity with external storage and display devices, ensuring fast performance and low latency for more responsive gaming. The processors will enable designers to build energy-efficient, compact and powerful gaming consoles that can

smoothly run graphics and power-intensive gaming.

Long-range transceiver modules

The RYLR684/RYLR689 from Reyax Technology are cost-effective LoRa and (G)FSK (Gaussian frequency-shift keying) transceiver modules that are suitable for long-range wireless applications. The modules are based on

a Semtech LLCC68 chip and have a programmable transmis-

sion power level of -20dBm to 22dBm. The products have been launched to replace the traditional frequency shift keying (FSK) and amplitude shift keying (ASK) technologies that had higher energy consumption. Both the modules come with metal covering that protects them against EMI interference, and offer considerably better performance even when surrounded by noise from other devices. The LoRa modules are suitable for a wide range of use cases, including asset tracking, smart agriculture, smart buildings, industrial automation, and various other IoT applications.

Narrowband IoT chipset

Renesas Electronics Corporation's RH1NS200 is a Narrowband Internet of Things (NB-IoT) chipset, specifically designed for the Indian smart metering market. The chipset operates seamlessly on major Indian telecommunications networks, meeting the 'Make in India' requirements. It is suitable for applications such as asset tracking, lighting, and security. The NB-IoT chipset can run at supply voltage ranging from 2.2 to 5.5V, making it easier to integrate it in a design. One of the notable advantages is its remarkably low

power consumption of only 1µA in deep sleep mode, which significantly extends battery life. The RH1NS200 chipset also incorporates an integrated Evaluation Assurance Level (EAL5+) Secure Element (SE), which enhances the security and eliminates vulnerabilities that could compromise end application safety, particularly in power and water metering systems. The chipset targets specific bands for India, supports high transmit power, and includes a field-proven and carrier-approved LTE protocol stack and software suite.

Wi-Fi 7 router/gateway platform

MediaTek's Filogic 880 is one of the world's first complete Wi-Fi 7 solution combining an access point and an advanced host processor. The gateway platform is suitable for application in operator, retail, and enterprise markets. It offers a scalable architecture that can support up to penta-band 4x4 with a maximum speed of up to 36Gbps. Filogic 880 incorporate the latest Wi-Fi 7 and Bluetooth technology, making it suitable for smartphones, tablets, laptops, and wearables. The Filogic platform offers features such as 4096-QAM, 320MHz channel bandwidth, and MLO and MRU capabilities. The wireless solution boasts energy efficiency, a powerful quad-core CPU, and specialised NPU, catering to the growing demand for fast and reliable wireless connections. Filogic 880 supports IEEE 802.11 Wi-Fi 7, dual-band and tri-band configurations, and Bluetooth 5.3 with LE Audio, providing a comprehensive solution for wireless connectivity needs.

BLE based beacon

IQonboard has developed the IQtag, a Bluetooth LE-enabled beacon, which
