

Enhancing Defense With QUANTUM COMPUTING And INTELLIGENCE

Quantum computing and intelligence offer a glimpse into the future of defense, with the potential to revolutionise everything from cyber security to cyber warfare

Cyber security has become a major concern in the digital age with the increasing number of cyber-attacks being launched every year. Cyber Threat Intelligence (CTI) is a field that has emerged to help organisations better understand and defend against these attacks.

CTI involves collecting and analysing information about potential cyber threats to identify patterns, anticipate attacks, and develop proactive defense measures.

In recent years, the emergence of quantum computing has introduced a new dimension to the field of CTI. In this article, we will discuss how quantum computing can enhance defense capabilities in the field of CTI.

Quantum computing and cyber threat intelligence

Quantum computing has the potential to revolutionise CTI by enabling the pro-
