

more stability studies. Once out, it can completely change the prototyping and fabrication of regular PCBs around the globe.”

While noting that it takes some time for the market to accept a product and for the product to get stabilised, Dr Rao is content about his seven-people-strong team’s success in pioneering such a unique product that “nobody else has at this point in time.”

Funded initially through the Startup India Scheme, they got scale-up support of around ₹4 million from MeitY recently, with which they have opened a manu-

facturing facility in Noida to produce 100-200kg of product per month. Dr Rao says, “We are bootstrapped and have been generating a small amount of revenue with our products and services. We want to scale up organically as demand grows with the market, not using investor funds for now.”

Dr Rao says the startup is open to freshers looking for internship roles in fields like electronics, electricals, biosensors, material science, physics, and chemistry.

3 USHERING IN A NEW VAYVE OF E-MOBILITY WITH SOLAR CARS

While all electric vehicles (EVs) boast of reducing carbon emissions, Pune based Vayve Mobility has gone a step ahead with an electric four-wheeler partially powered by solar energy to suit urban sensibilities

The electric mobility market in India has seen tremendous growth in the past five years due to increasing climate consciousness and reduced operational costs. While electric two-wheelers have found greater acceptance as the Indian consumer navigates through overly crowded roads, the absence of the comfort provided by a four-wheeler is very conspicuous.

To fill this void, Pune based startup Vayve Mobility has come up with an electric car with a solar photovoltaic roof designed to meet the needs of modern urban commuters. The compact two-seater car, called Eva, is designed with a focus on practicality and ease of use, to manoeuvre through traffic and park in tight spaces.

Incorporated in 2021, Vayve Mobility is the brainchild of Chief Executive Officer Nilesh Bajaj and Chief Technology Officer Saurabh Mehta, who started working on the project

Eva is a two-seater car and can seat two adults and a child

in 2019, along with Programme Manager Ankita Jain and Chief Operating Officer Vilas Deshpande. “We believe that although two-wheelers

are convenient, they don’t give you the safety and the comfort of a car. At the same time, a car need not be a five-seater, 500-kilometre range ve-
