Foxconn to unveil new electronics manufacturing facility in Telangana

Taiwan based electronics bigwig Foxconn Interconnect Technology is all set to open a manufacturing facility near Hyderabad soon. As part of its \$500-million investment plans for Telangana, the iPhone maker laid the foundation for this new factory at Kongara Kalan. It is learnt that Foxconn wants to grow its manufacturing presence in the country due to the rapid scaling of the electronics manufacturing business in India on strong sales. The expansion is part of the efforts of global tech companies to diversify their supply chain and production sites beyond China. As per a tweet from the state government, around 25,000 employment opportunities are expected to be generated in the first phase of this factory.

After Tata takeover, Wistron set to withdraw from India

As reported by BusinessLine recently, one of the three iPhone manufacturers in India, Wistron, is planning to shut its operations in the country. It is noteworthy that its largest portion of Indian business, the iPhone manufacturing facilities in Karnataka, will soon be taken over by Tata Electronics. Hence, the company is expected to approach the National Company Law Tribunal and the Registrar of Companies to dissolve its India operations within the next year. It is further learnt from the report that Wistron's services business for the repair and maintenance of Apple products will be the only operation that will continue in India.

MG Motor to Indianise operations and dilute shareholding in 2-4 years

British automobile brand MG Motor's Indian branch recently announced a strategic 5-year business roadmap to 'Indianise' its business operations. Focused on sustainable growth and meaningful societal impact,

the automaker plans to localise and indigenise the latest technology while also increasing Indian shareholding over the next 2-4 years. It aims to boost local sourcing and manufacturing across its operations by 2028 through an extensive series of programmes, including exploring cell manufacturing and clean hydrogen-cell technology through owned or third-party facilities. In addition to investing over ₹50 billion in India by 2028 and bringing a range of new EVs, MG Motor also plan to train 100,000 students under its MG Nurture programme in EV, ADAS, and connected car tech.

Indian semicon startup InCore secures \$3 million seed fund

India's leading fabless-semiconductor startup InCore Semiconductors recently raised \$3 million in its seed funding round led by Sequoia Capital India. Focused on building class-leading RISC-V based processor solutions, the company plans to utilise the newly raised fund to accentuate its portfolio of Core-Hub generators and reference system-on-chip platforms aimed at multiple segments of the embedded chips space. The Chennai based startup was launched by G.S. Madhusudan, Neel Gala, Gautam Doshi, and Arjun Menon in 2018 to enable customers with turnkey processor IP solutions for automotive, industrial automation, and general electronics.

Indian solar supply-chain startup secures ₹110 million funding

A leading Indian supply-chain platform for solar installation companies, Solar Ladder, recently announced that it raised ₹110 million in a seed funding round led by Axilor Ventures. Founded in 2021 by Manan Mehta, Abhishek Pillai, and Farhan Ahmed, Solar Ladder aims to establish a robust marketplace for solar needs. The startup plans to utilise the newly raised money to distribute software that automates processes for solar installers, allowing them to expand their business tenfold and

aiming to become the go-to ecosystem for solar installation companies.

RACEnergy set to expand with newly-raised \$3 million

A leading deep-tech battery swapping company in India, RACEnergy, recently announced that it has secured \$3 million in a pre-Series A round as a mix of debt and equity. With the aim to revolutionise the electric mobility sector in India, the 2019-born company plans to develop its battery-swapping technology and build new facilities to support its operations. Led by growx Ventures with participation from notable investors like Micelio Mobility, Huddle, and other angel investors, RACEnergy informed that the funding round was held earlier this year.

RunR Mobility and ReadyAssist to provide roadside assistance to EVs

Leading Indian electric vehicle (EV) manufacturer RunR Mobility recently announced its after-sales service partnership with vehicle assistance player ReadyAssist. They have signed an after-sales service agreement to cater to real-time breakdown problems using deep machine learning, data intelligence, and operations efficiency. As both parties believe that inadequate after-sales services and roadside assistance pose a major challenge, they have joined hands to aid the customers while also strengthening the EV ecosystem.

Tesla Power USA partners with Indian Oil for battery distribution

Tesla Power USA and Indian Oil Corporation Limited (IOCL) announced a national strategic alliance in battery distribution and sales. According to the official release, the partnership will enable Tesla Power USA batteries to potentially sell and service their batteries at over 36,000 IOCL petrol pumps across India, providing availability and convenience to purchase and service automotive batteries. The partners hope the current collaboration will pave the way for the replication of the tyre battery accessories (TBA) concept pan India.
