

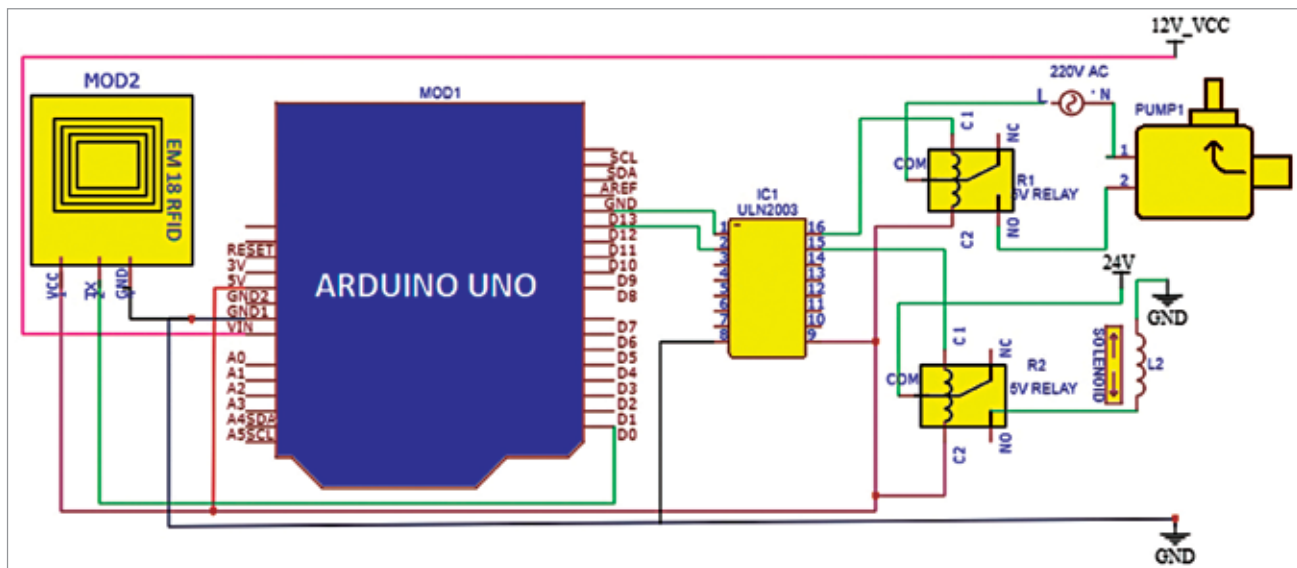

Fig. 5: Circuit diagram

relays get energied. The first relay drives the water/fuel pump motor and the second relay drives the solenoid valve. Here, ULN2003 relay driver IC is being used to drive

both the relays.

The circuit can fill half a litre of water/fuel in 16 seconds, and so one litre in 32 seconds, and so on, taking 80 seconds for 2.5 litres. **EFY**

Rakesh Jain, Assistant Professor in ECE Department of Geetanjali Institute of Technical Studies, Udaipur, has master's degree in VLSI and BE degree in Electronics and Communication. His research areas are sensors and microcontrollers. He has 26 copyrights and 3 Indian patents, and is recipient of Mewar Scientist Award 2023

India's 1st Independent Survey
