

Wi-Fi Analysing SMART WATCH

ASHWINI KUMAR SINHA

This Wi-Fi analysing smart watch is another version of the world's first programmable smart watch with fitness tracking project that was published

in February issue. We want to customise it in such a way that it can help us analyse Wi-Fi networks and their data and signal strength. The author's prototype of such a smart

watch is shown in Fig. 1.

Wi-Fi signal and the network's analysis is needed by the engineers while setting up Wi-Fi routers. It also helps us connect to the strong-

Fig. 1: Author's prototype

BILL OF MATERIAL

Components	Quantity	Description
ESP12 F (MOD3)	1	SMD Wi-Fi SoC chip
MCP73812T (MOD4)	1	Battery charging IC
Round LCD (MOD1)	1	GC9A01 round LCD display
LED	1	SMD LED
Resistor 470Ω R2, 2kΩ R3, 100Ω R1	1	SMD
Capacitor 4.7μF (C1, C2)	2	SMD ceramic
2-pin jumper (JP1)	1	Jumper pin
Micro USB (MOD2)	1	SMD micro USB female
Switch (S1)	1	SMD slide switch
3.3V battery	1	Microsize battery
3D printed case	1	Body for watch
