

Fig. 4: Code snippet

The project can be extended to

Now power the ESP32 camera, insert the SD card, and press the button on pin 13 to capture the picture. If you are using the PIR sensor, make some movement in front of the sensor and the camera will start taking picture, which gets captured and saved in the SD card. To see the saved picture, open the SD folder on your phone or laptop. **EFY**
