

EME Automation CIO 1004 4G Cellular Gateway

EME Automation's CIO 1004 is an industrial 4G gateway designed to connect modbus enabled equipment over 4G to cloud network enabling remote diagnostics. The device can pre-configured to sample and collect data from a variety of Modbus Slaves such as energy meters, sensors, VFD's, PLC's etc. This data is sent to the desired server.

Specifications:

- Network module: 4G(LTE) – upto 10 Mbps, 2G – 85.6 kbps
- Protocols: HTTP POST
- APN: APN via Config File
- SIM: Micro SIM slot (internal)
- RS485: Modbus RTU Master, Config file uploading
- Supported Data Formats: Customizable as per server requirements
- Server updating speed: 3sec +/- 10 seconds (network dependent), Adjustable via config file
- Scan Time between packets: 30ms~5000ms adjustable via config file
- Maximum slave devices: 13 (tested)
- Device Configuration file support: Yes, CSV file with

specific format for

1. Configuring Read Modbus data registers
2. Configuring post specific details

Electrical specifications:

- Rated Supply Voltage: 24VDC
- Supply voltage limits: 19.2v~28.8v
- Inrush Current: 2A
- Power consumption: 3Watts
- Regional Band support:
 1. Model A- India & China
 2. Model B- Europe & Middle East Asia
 3. Model C- Australia & Latin America

 Factory: B-47-A, Near Aqua Goa, Kundaim IDC, Kundaim Goa 403115, Email id: marketing@emeautomation.com / sales@emeautomation.com, Contact no: 7028022992 / 8788907741, Website: www.emeautomation.com

Cleanroom Infrastructure and Controlled Environment for Electronics

The microelectronics sector is rapidly growing across the globe, due to an ever-increasing demand for use of these components in technology in a range of different industries. When it comes to sensitive advanced electronics, we cannot risk any particulate contamination whatsoever—a tiny speck of dust on a microchip which can be as damaging as a huge boulder. To help ensure that these sensitive products are unaffected by dust and other contaminants during the manufacturing process, it is a necessity to use classified cleanrooms for the production facilities.

Microcool understands how critical controlling contamination is to an electronics manufacturer's success. With expert trained professionals and the latest technologies, we provide complete solution like conceptual designing, detail engineering, material procurement, installation, testing and validation with 100% certainty that our cleanrooms attain the industry's highest standards for contamination control and clean room compliance. Microcool Systems Pvt Ltd with its 28 years of experience in providing highly engineering solutions to Industries is well equipped with in terms of designing and execution of the complete project. SMT, Battery, Inverter, Semiconductors, Sensors, PCB Manu-

facturing, Research Labs are quite a few facilities that require classified cleanrooms with controlled environment.

Start-to-Finish solution –

- Cleanroom Structure
- Cleanroom Modular Panelling
- Cleanroom Lighting & Flooring
- HVAC, Fire protection, Utility Piping, Electrical
- Cleanroom Equipment & Furniture
- Validation
