India's PC and Tablet Market Show Decent Growth in 2022

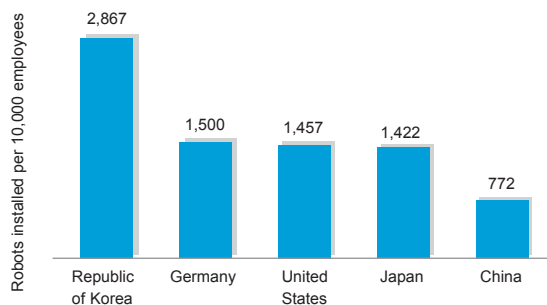

As per a Canalsys report, 2022 proved to be a good year for the Indian PC market, with shipments going up by 5% year on year. It suggested that PC and tablet shipments in India will fall by 6% in 2023, which is better than the expected global fall of 9%. The study betted on the country's GDP to fight the shadow cast by the weak global economy this year.

Global Automotive Industry Engages One Million Robots: Report

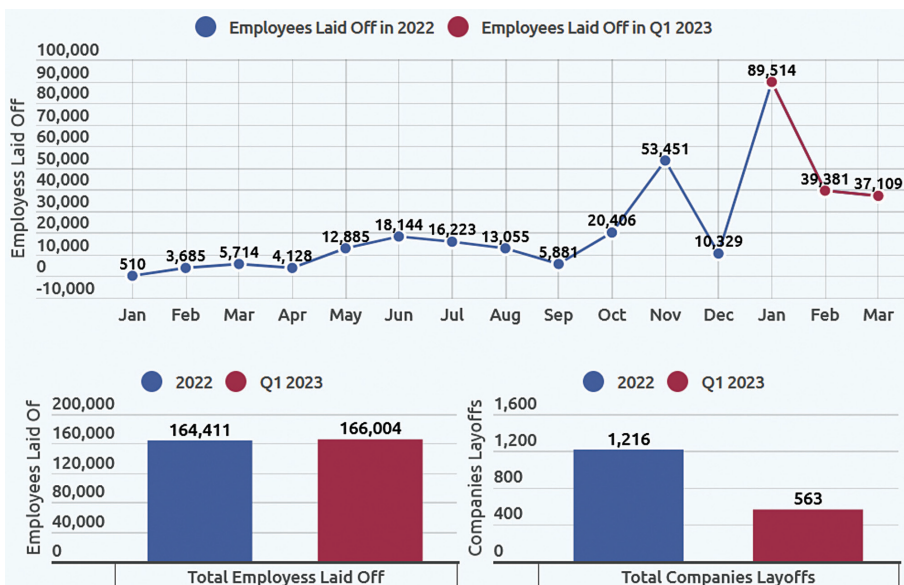

As per the latest report by the International Federation of Robotics (IFR), the operational stock of robots working in the automotive industry hit a new record and touched the milestone of about one million units around the factories globally. The report remarked that the automotive industry leads with 33% of the total robots installed across all sectors. Compact sizes, low cost, easy adaptability and operability are strong factors for automation.

Over 150,000 Tech Layoffs in 1Q 2023, More Than Entire 2022

A recent report by Finbold indicates that in Q1 2023, the global tech industry recorded 166,004 layoffs. It said that January saw the highest layoffs, representing 53% or 89,514 workers laid off in total. As per the report, economic uncertainty, rising interest rates to combat inflation, and sluggish sales were the major factors driving the lay-off spree. Artificial intelligence systems are adding fuel to this uncertainty, opined the release.
