

India's electronics exports break all records; up by 58%

As per the recent data released by India Cellular and Electronics Association (ICEA), India's electronics industry witnessed bumper exports of around ₹1,850 billion (1.85 lakh crore rupees) in FY22-23, which is 58% higher as compared to ₹1,169.36 billion in FY21-22. The

export of mobile phones—the key driver of these record exports—crossed the \$10 billion threshold for the first time in any fiscal year, reaching around \$11.12 billion (over ₹90,000 crore) in FY23. Now, mobile phone exports make up for 46% of the total electronic goods exports

from India. Interestingly, Apple has played a major role by exporting products worth over \$5 billion from India in FY23. It is noteworthy that countries like UAE, the US, the Netherlands, the UK, and Italy are the major importers of India-made products.

Electronics manufacturing targeted at ₹24,000 billion by 2025-26

Recently, the Union Minister of State for Skill Development & Entrepreneurship and Electronics & Information Technology Rajeev Chandrasekhar addressed around 1,500 students as part of his 'New India for Young India' initiative. He

announced there that the target of the Central government is to increase electronics manufacturing capability to ₹24,000 billion (₹24 lakh crore) by 2025-26, which will also help create over one million jobs. The minister cited examples

of the opening of India offices of companies like Salesforce, Truecaller, and Renesas to highlight how opportunities are abundantly available and the skilling will help to equip young Indians to take on these opportunities.

PEOPLE (on the move)
