

TOUCHLESS WATER DISPENSER For Washing Hands

RAKESH JAIN AND RAHUL MOUD

Lots of water is wasted due to its improper use for washing hands, which is required frequently during pandemics like Covid-19. This adds up to a con-

BILL OF MATERIAL

Components	Quantity
Arduino Uno (MOD1)	1
12V, 1A adaptor	1
Ultrasonic sensor HC-SR04 (MOD2)	1
Transistor BC547 (T1)	1
5V relay (R1)	1
Buzzer (B1)	1
Cooler water pump	1
1k resistor (R1)	1
LED	1

siderable amount in public places like hospitals, airports, railway stations, hotels, and restaurants.

Generally, people do not rub their hands with soap for the required 20 seconds before washing them with running water. Or they leave the tap running also while they are rubbing their hands with soap. This proposed system can help solve both these problems.

In addition, touch-
