Hi-link DC - DC Power Converters

DC-to-DC converter is a device which converts a source of direct current (DC) from one voltage level to another. Power levels range from very low (small batteries) to very high (high-voltage power transmission).

Wide range of input available.

Available in various power wattages range starting from 1W to 50W.

Dual output voltage available.

Isolated constant voltage input non stabilized single output power module.

Less ripple noise.

Miniature and compact size.

USED IN

Battery Supply

EV

Robotics

Solar Panels

UPS

Elevators
