

to the Indian market. Our goal is to deepen our roots in India, especially in the AI and IoT sectors, creating more alliances on the way.

**Q: Why choose Bangalore as Advantech's Indian headquarters? Are there expansion plans for other Indian cities?**

**A:** While Bangalore offers logistical advantages. It is also the best place to headquarters the IT and software teams. Bangalore is also an ideal city for housing a small part of our global e-commerce team. The IT and software talent here is exceptional. I understand that the workforce in Bangalore is a mix of all parts of India, which is an essential ingredient to ensure success for us and our partners.

That said, we are also investing in Pune for IT services. We also see potential in cities like Delhi, Kolkata, Hyderabad, and Chennai and are planning to set up sales and technical support offices there.

**Q: Are there collaborations with academic institutions for R&D?**

**A:** Collaborations with Academia are a must to innovate. In figures, we have partnered with over 30+ universities for internships. Additionally, we're discussing setting up an IoT lab at Christ University in Bangalore to facilitate IoT courses. We plan to implement this model in more universities in India.

**Q: Is talent acquisition becoming more challenging, and how are you addressing this?**

**A:** Talent acquisition is a global challenge. We're diversifying our recruitment channels, strengthening our internship programs, collaborating academically, and inviting potential talents to our campus in Taipei for an immersive experience. In Taipei, we have a demo room and other facilities where they can experience how Advantech works and consider joining Advantech in the future.

**Q: What are Advantech's core values that attract talent?**

**A:** Our primary talent acquisition principle is "right people on board." We proactively seek out high-potential individuals and align them with roles that suit their strengths.

There have been instances where we have onboarded professionals without job openings. It is all about the right mindset for us. ■
