

significant focus on local participation. It has initiated a bidding process for 15 solar power projects. Sonelgaz, the state-owned electricity and gas distribution company, oversees the bidding process. The solar project involves constructing 15 solar power plants across 12 provinces, with capacities ranging from 80MW to 220MW each. Foreign winning bidders must have a minimum of 35% national participation, potentially involving the supply of solar panels, cables, generators, and other equipment.

Samsung Foundry to manufacture Tenstorrent's AI chiplets

Tenstorrent has partnered with Samsung Foundry to manufacture its next-generation AI chiplets using Samsung's advanced 4nm manufacturing process. These chiplets will utilize Samsung's SF4X manufacturing process, known for its 4nm architecture. Keith Witek, Tenstorrent's COO, is noted for driving strategic partnerships, such as the one with Samsung. Samsung Foundry is expanding in the US and aims to provide cutting-edge semiconductor technology to its customers. This collaboration will enable Tenstorrent to leverage Samsung Foundry's advanced facilities in the US with the latest manufacturing nodes, ensuring competitive offerings in the market.

Murata Electronics partners with Arvato for distribution centre in Netherlands

Murata Electronics has partnered with Arvato to operate its central distribution centre for the EMEA region at the Gennep site, Netherlands. The Gennep site's strategic location offers easy access to major airports (Frankfurt, Amsterdam, Liège, Maastricht) and crucial ports (Rotterdam, Antwerp, Hamburg, Bremen), facilitating efficient transportation. Proximity to primary parcel service hubs allows seamless integration of incoming goods into the inventory, resulting in swift distribution and quicker deliveries to European customers. Arvato's highly automated shuttle system with 42,000 bins will provide high-density storage, enhancing efficiency and speed in order picking and packaging processes.

Avent partners with Kerlink for LoRaWAN technology for its IoT platform

Avnet and Kerlink have entered into a partnership to accelerate Avnet's IoT strategy by seamlessly incorporating LoRaWAN

technology into their IoT solution accelerator platform, IoTConnect. This partnership will facilitate the global deployment of LoRaWAN technology and expand Kerlink's market reach in Asia. Avnet will gain access to LPWAN solutions for building and managing LoRaWAN networks, saving time and costs.

Fabless startup Rebellions teams up with Samsung Electronics to build AI chips

Rebellions, an AI fabless semiconductor startup, has partnered with Samsung Electronics to collaborate on the development of high-performance AI semiconductors. The partnership aims to capture the AI semiconductor market by leveraging domestic capabilities. Samsung will handle production and be involved in logic and layout design and validation. The semiconductor will use Samsung's 4nm process and HBM3E memory technology. The entire development process will rely on domestic companies' capabilities, without involving overseas foundries or design houses.

AMD to acquire open source AI software startup Nod.ai

Advanced Micro Devices (AMD) is set to acquire the open source AI software startup Nod.ai as part of its AI growth strategy. This acquisition aims to enhance AMD's product offerings and compete in the AI industry. Nod.ai's technology will be integrated into AMD's products, including instinct data-centre accelerators, Ryzen processors, and Radeon GPUs, offering developer tools, libraries, and machine learning models to customers. AMD and Nod.ai have collaborated on machine learning model optimisation projects in the past and are currently working together to optimise large language models (LLMs) on AMD hardware. This acquisition is seen as a move by AMD to compete with its rival chipmaker Nvidia, which has a strong presence in AI due to its early entry into the sector.

Denso to invest \$500M in Coherent Corp's SiC division

Denso Corporation has invested \$500 million in Coherent Corp's Silicon Carbide (SiC) division, securing a 12.5% ownership stake to ensure a long-term supply of SiC wafers, which are crucial for electric vehicle (EV) parts and supporting the goal of achieving a carbon-neutral society through increased EV adoption. Mitsubishi Electric also invested \$500 million to acquire a 12.5% non-controlling share in the SiC business. Coherent initiated its SiC business in April 2023, focusing on producing SiC wafers.

Semiconductor CEO could lead to positive developments, as India has received two fabs and three ATMP (assembly, testing, marking, and packaging) proposals, which are under evaluation.

CDIL becomes India's first SiC components manufacturer for EVs

CDIL has become India's first silicon carbide (SiC) components manufacturer, scaled to make auto-grade devices, including SiC MOSFETs, SiC Schottky diodes, rectifiers, zeners,

and TVS diodes, among others for the global as well as the domestic market. An MoU has been signed between CDIL and the Semi-Conductor Laboratory (SCL) to strengthen indigenous chip manufacturing and packaging in India. The company inaugurated a new surface mount semiconductor packaging line at its Mohali plant, and the expansion of assembly lines will increase CDIL's total capacity at the facility to 600 million units annually. CDIL has also set up a testing and reliability laboratory at its Mohali plant.

Sterling and Wilson bags NTPC RE project worth ₹15.35 billion

Sterling and Wilson Renewable Energy has secured a significant engineering, procurement, and construction (EPC) project worth ₹15.35 billion from NTPC Renewable Energy, further strengthening its partnership with NTPC. The project marks Sterling's third order from NTPC and is for 300 MWac at Khavda RE Power Park in the Rann of Kutch, Gujarat. The share
