

“HIGH-VALUE ADDITION Can Be ACHIEVED Only If The Percentage Of LOCAL VALUE Addition Is INCREASED”

JAIRAJ SRINIVAS

DIRECTOR GENERAL OF THE CONFEDERATION
OF INDIAN MSMEs IN ESDM AND IT (CIMEI)

In an exclusive and candid interview with EFY's Yashasvini Razdan, Jairaj Srinivas, Director General of the Confederation of Indian MSMEs in ESDM and IT (CIMEI), discusses the need for enhanced collaboration, clear policies, effective initiative implementation, skill development, and improved infrastructure to empower the MSME sector, promote local manufacturing, and drive innovation and economic growth in the electronics industry

Could you elaborate on the challenges for MSMEs in the ESDM industry?

Policymakers are grappling with challenges in effectively implementing policies, notably in India's 'Make in India' initiative. While sectors like defence and railways succeeded in promoting local manufacturing, electronics and power industries still

heavily rely on imports. Multinational corporations (MNCs) often fail to recognise local manufacturers. For instance, an iPhone charger costing around ₹800-₹2,000 is manufactured locally for just ₹316.

However, these local manufacturers lack original equipment manufacturer (OEM) status, causing uncertainty. Unlike the electronics

industry, Maruti's 'MGP' recognises local manufacturers for locally made products. Electronics, however, lack this recognition. Local manufacturers supply chargers to MNCs, which rebrand and resell them. The absence of OEM status hampers local manufacturers and fosters uncertainty. This issue hampers local manufacturing and cybersecurity.
