

TABLE 1
STANDARD SIZES OF SHIPPING CONTAINERS (ISO:668)

ISO Designation	Common Name	External Dimensions			Minimum Internal Dimensions			Maximum Gross Mass
		Length	Height	Width	Length	Height	Width	
1F *	5 foot	1.460 m (4' 9.5")	2.438 m (8 ft)	2.438 m (8 ft)	1.270 m (4' 2")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	5,080 kg
1EEE	45 foot high cube	13.716 m (45 ft)	2.896 m (9' 6")	2.438 m (8 ft)	13.542 m (44' 5.15")	2.655 m (8' 8.5")	2.330 m (7' 7.73")	36,000 kg
1EE	45 foot standard	13.716 m (45 ft)	2.591 m (8' 6")	2.438 m (8 ft)	13.542 m (44' 5.15")	2.350 m (7' 8.5")	2.330 m (7' 7.73")	36,000 kg
1E *	6½ foot	1.968 m (6' 5.5")	2.438 m (8 ft)	2.438 m (8 ft)	1.778 m (5' 10")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	7,110 kg
1D	10 foot	2.991 m (9' 9.75")	2.438 m (8 ft)	2.438 m (8 ft)	2.802 m (9' 2.3")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	10,160 kg
1CCC	20 foot high cube	6.058 m (19' 10.5")	2.896 m (9' 6")	2.438 m (8 ft)	5.867 m (19' 3")	2.655 m (8' 8.5")	2.330 m (7' 7.73")	36,000 kg
1CC	20 foot standard	6.058 m (19' 10.5")	2.591 m (8' 6")	2.438 m (8 ft)	5.867 m (19' 3")	2.350 m (7' 8.5")	2.330 m (7' 7.73")	36,000 kg
1C	20 foot	6.058 m (19' 10.5")	2.438 m (8 ft)	2.438 m (8 ft)	5.867 m (19' 3")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	36,000 kg
1BBB	30 foot high cube	9.125 m (29' 11.25")	2.896 m (9' 6")	2.438 m (8 ft)	8.931 m (29' 3.6")	2.655 m (8' 8.5")	2.330 m (7' 7.73")	36,000 kg
1BB	30 foot standard	9.125 m (29' 11.25")	2.591 m (8' 6")	2.438 m (8 ft)	8.931 m (29' 3.6")	2.350 m (7' 8.5")	2.330 m (7' 7.73")	36,000 kg
1B	30 foot	9.125 m (29' 11.25")	2.438 m (8 ft)	2.438 m (8 ft)	8.931 m (29' 3.6")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	36,000 kg
1AAA	40 foot high cube	12.192 m (40 ft)	2.896 m (9' 6")	2.438 m (8 ft)	11.998 m (39' 4.375")	2.655 m (8' 8.5")	2.330 m (7' 7.73")	36,000 kg
1AA	40 foot standard	12.192 m (40 ft)	2.591 m (8' 6")	2.438 m (8 ft)	11.998 m (39' 4.375")	2.350 m (7' 8.5")	2.330 m (7' 7.73")	36,000 kg
1A	40 foot	12.192 m (40 ft)	2.438 m (8 ft)	2.438 m (8 ft)	11.998 m (39' 4.375")	2.197 m (7' 2.5")	2.330 m (7' 7.73")	36,000 kg

Note: (*) 1F and 1E have been dropped from current version but continue to be made by many (Source: Wikipedia)

uct packaging is to keep your stuff safe and sound. Imagine your product going on a big adventure from the factory to your doorstep. Along the way, it faces all sorts of challenges like bumps, bad weather, and even shady characters who might want to mess with it. That's where packaging comes to the rescue!

Packaging is like a superhero shield. It soaks up any bumps and jolts during the ride, making sure your product arrives in one piece, free of any scratches. Plus, it keeps your precious stuff dry on rainy days. Sometimes, we even use multiple layers of packaging, like a gift within a gift, just to be extra sure.

But that's not all! Packaging

also has a secret mission: it guards your product against sneaky tricks. When you buy something, all you can see is the package. If it's not tamper-proof, some not-so-nice folks could swap out the good stuff with something fake and trick you. A tamper-proof package acts like a security guard, making sure everything inside is legit. So, you can trust the company and have a happy shopping experience!

Transportation. On its journey from the factory to your doorstep, your favourite products travel in various ways like trucks, trains, ships, and planes. It's important to note that most of the time, the manufacturer doesn't control how these

products get to you. Each of these transportation methods has its own rules, and your product and its packaging have to follow them.

In the last couple of decades, one of the biggest achievements in making this journey smoother has been the standardisation of shipping containers. Think of them as the building blocks of transportation. These containers come in standard sizes, as set by ISO:668. They make it easy to load and unload goods quickly and smoothly, whether they are on a ship, plane, truck, or train.

So, when we design the packaging for products, we have to be mindful of these container sizes. We need to create boxes that fit perfectly in these containers. If our packages are too big or too small, it can cause problems. We might end up paying extra for shipping, or our products might get delayed at different points along the way because of their odd siz-

es. So, packaging matters a lot when it comes to getting your favourite things to you efficiently!

Handling. Designing product packaging requires careful consideration of how the product will be handled throughout its journey. When packages are transported, they are often stacked, so the packaging needs to be sturdy enough to withstand the weight. It is important to think about the direction in which the load will be placed and add the right protection.

Some products have delicate parts that need special care. The packaging should clearly show handling instructions that are visible even when the boxes are stacked.
