

"SCIENTISTS AND ENGINEERS ACROSS INDIA ARE ACCELERATING THEIR TEST GOALS WITH ALL CLASSES OF MOKU PRODUCTS..."

—Daniel Shaddock, co-founder & CEO, Liquid Instruments

In an exclusive interview with Electronics For You, Daniel Shaddock, of Liquid Instruments, discusses the company's growth in India, strategic importance, and innovative solutions.

How was business from India in the last fiscal year?

We're pleased to report that business in India was strong during the last fiscal year. Thanks to our growing team and the support of our three distributors here, we've expanded our business steadily. We achieved significant growth in the areas of academia and research, and we're confident that this trend will continue.

What's the growth expected/targeted for this fiscal year?

We're targeting a 50% growth in India in the current fiscal year, which is being driven by increased investment in high-end research areas like optics, photonics, and quantum.

How important is India as a market, on the global map?

With a rapidly growing economy and a large population of engineers and scientists, India is a strategic market for Liquid Instruments. India is also a major hub for the \$300 billion global electronics manufacturing market. Thanks to India's burgeoning industrial and technological sectors, the need for flexible test and measurement solutions here is increasing quickly. Additionally, India's emphasis on quality assurance and compliance is fueling demand for cutting-edge technologies in automotive, telecommunications, and other key sectors, where scientists and engineers are feeling
