

nology, and intelligent home systems. The Metro ESP32-S3 consists of a dual-core 240MHz processor, placing it on par with the dual-core capabilities of the ESP32. The ESP32-S3 mini-module embedded in the Metro is coupled with 512kB of static random access memory (SRAM). The board uses SRAM for quick memory access and PSRAM for spacious but slightly slower access.

A development board for diverse applications

STMicroelectronics has released a development board for creating diverse applications with STM32H5 microcontrollers (MCUs). The STM32H573I-DK Discovery kit grants developers the ability to thoroughly investigate the

various integrated characteristics of the STM32H5, including analogue peripherals, timers,

the ST ART (adaptive real-time) accelerator, multimedia interfaces, and computational accelerators. This functionality simplifies the assessment of new designs for industrial programmable logic controllers (PLC), motor drives, and intelligent appliance controllers, including those in air-conditioners, refrigerators, and washing machines. The kit is also instrumental in developing applications such as alarm systems, communication centres, and intelligent lighting controls. The discovery kit, equipped with a microcontroller, colour touch display, and digital microphone, also features USB, Ethernet, and Wi-Fi interfaces. Additionally, it includes an audio codec, flash memory, and slots for expansion shields and daughterboards, amplifying its versatility.

High-density evaluation board for multi-port fast charging

Silanna Semiconductor has introduced

the SZPL3002AA-EVB03 evaluation board (EVB), streamlining designing, testing, and prototyping 65W multi-port USB- power delivery (PD) and QC fast charging applications. Sporting two USB-C female connectors, a single USB-A connector, and input screw terminals for connection to a typical 24V DC supply, this board is a ready-to-use powerhouse straight from the factory,

featuring two 65W Type-C PD ports with a maximum power output capped at 65W. Moreover, the board facilitates communica-

tion via an I2C bus interface, which not only enables it for advanced applications in shared power and multi-output charging ports but also permits the programming of on-board one-time programmable memories. The board is a versatile solution, integrating with a variety of applications including AC/DC chargers, USB-PD charging strips, televisions, docking stations, and laptops, capitalising on its innovative features.

Industrial micro ATX motherboard

IBASE Technology has launched the MB998 micro ATX motherboard. The motherboard is optimised for industrial use, supporting 13th/12th Gen Intel Core i9/i7/i5/i3 processors and up to

64GB DDR5 memory for high-speed performance in resource-

intensive tasks. The 5G-ready motherboard boasts captivating visuals, supported by high definition multimedia interface (version 2.0b), digital visual interface – Digital (DVI-D) and dual DisplayPort (1.4) (DP + +) interfaces. Its extensive connectivity suite features dual Intel 2.5G local area network (LAN) ports and various

I/O selections. The motherboard embeds features like a watchdog timer, digital I/O, iAMT (16.1), and firmware trusted platform module (fTPM), amplifying security, system oversight, and manageability. Furnished with a PCIe x16 and a pair of PCIe x4 slots, the board offers generous space for users to insert additional expansion cards, adapting to their distinct requirements.

DesignSpark's online product design centre

RS Group plc has launched an enhanced feature for its rapidly expanding DesignSpark online engineering community, Product Design Centre. The centre boasts extensive technical data on over a billion electronic

part numbers, equipping DesignSpark users with the knowledge to make better

choices for their design components.

Those utilising DesignSpark Engineer can expect an even richer product knowledge, covering technical attributes, predictive life cycle, alternative products, export compliance codes, and notifications on product changes or discontinuations. The Product Design Centre's enhances value to the DesignSpark computer-aided design (CAD) library, introducing over forty content types, including product data, 3D models, and schematics. All DesignSpark subscribers can access updated product details, datasheets, compliance statuses, and 3D models. Moreover, the DesignSpark creator and engineer tiers offer detailed component data, including life cycle risks and design rule check (DRC) statuses.
