

THE DASHBOARD

Global Battery EV Sales To Cross 10 Million Units In 2023

In Q2 2023, global battery electric vehicle (BEV) sales grew by 50%, with one in every 10 cars sold during this period being a pure BEV. The total BEV sales are expected to surpass 10 million units by the end of 2023. Western Europe, North America, and nascent markets in Asia drove the growth in Q2. Chinese OEMs dominated the market but faced increasing competition in premium segments. China's domestic market did not keep pace, experiencing only 37% YoY growth. BEV sales in the USA grew by nearly 57% year-on-year, the highest among the top 3 EV markets. Tesla's Model Y retained its title as the best-selling passenger car globally, with sales surging by 83% year-on-year during Q2 2023. Model Y accounted for 64% of Tesla's global sales.

Silicon Battery Market To Mark Huge Growth By 2032 At 44.6% CAGR

The silicon battery market is poised for significant growth, with a projected value of \$1,989.6 million by 2032 at a CAGR of 44.6%. The <3000mAh segment witnessed significant growth in 2022, primarily due to the widespread use of semiconductors in consumer electronics, including portable computers, laptops, tablets, smartphones, EVs, and healthcare. Asia Pacific was a key growth region driven by the increasing demand for electric vehicles. While challenges like volume expansion and manufacturing costs may hinder market growth, technological advancements in end-use applications, such as quick charging and silicon in the positive terminal of batteries, contribute to the market's growth.

Lidar Market For Automotive To Grow To \$8.4 Billion By 2033

The lidar market for automotive applications is projected to reach \$8.4 billion by 2033, driven by increasing demand and innovations in beam steering technologies, performance improvement, and cost reduction in lidar transceiver components. The research tracked the development of 95 global players and suggested that nearly all automotive original equipment manufacturers (OEMs) except Tesla are pursuing sensor fusion with lidar as part of their future strategies. The lidar market is expected to expand beyond automotive, offering opportunities for conventional material and component companies and fostering consumer lifestyle innovations.
