

At-a-glance view of key industry trends that can shape the future of your business...

Global Smartphone Chipsets Market Falls By 39%

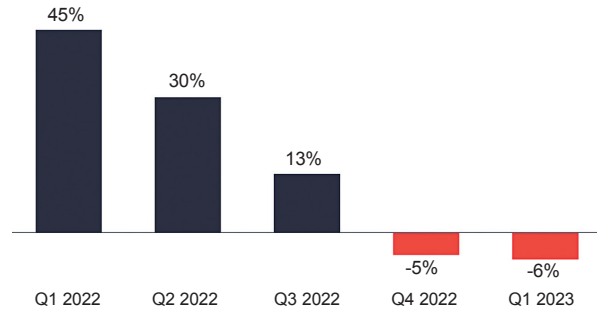

Global smartphone application processor (AP)/system-on-chip (SoC) chipset shipments declined by 39% YoY in Q2 2023 due to inventory correction and weak demand from Chinese OEMs. MediaTek lead the smartphone SoC market with a share of 30.1%. Apple experienced declining sales in Q2 2023 due to seasonality, but its Pro series performed better. Qualcomm's shipments increased in Q2 2023, thanks to the Snapdragon 8 Gen 2 adoption in Samsung's flagship smartphones and by Chinese OEMs. Samsung saw an increase in shipments in Q2 2023, with the Exynos 1330 and 1380 launch contributing to volumes in the low and mid-high segments.

Global Cellular IoT Module Revenue Falls By 6% in 1Q 2023

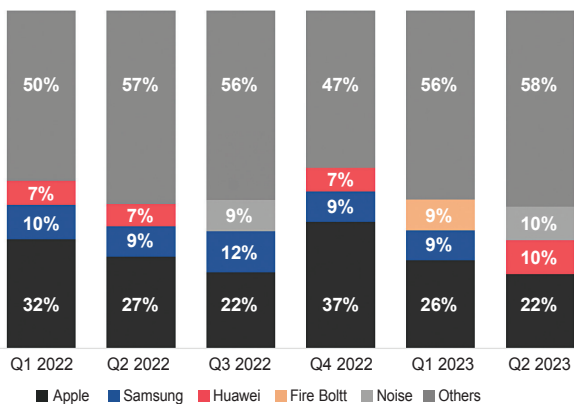

Global cellular IoT module revenue declined by 6% YoY in Q1 2023, with shipments declining by 16%, due to cautious end user spending, inventory reductions by device makers, and chip shortages. Despite the Q1 weakness, over 6 billion cellular IoT connections are expected by 2027, driven by various sectors and the emergence of 5G technologies. The top five cellular IoT module companies (Quectel, Fibocom, Telit Cinterion, Sierra Wireless, LG Innotek) accounted for 66% of the global market. The cellular IoT market accounts for roughly 3% of the global IoT enterprise market, indicating its limited impact on the overall IoT market. Three key technology trends include the expansion of 5G technologies, competition from new LPWA cellular modules, and the rise of 3GPP-based satellite connectivity.

Global Smartwatch Shipments Soar By 11.1%

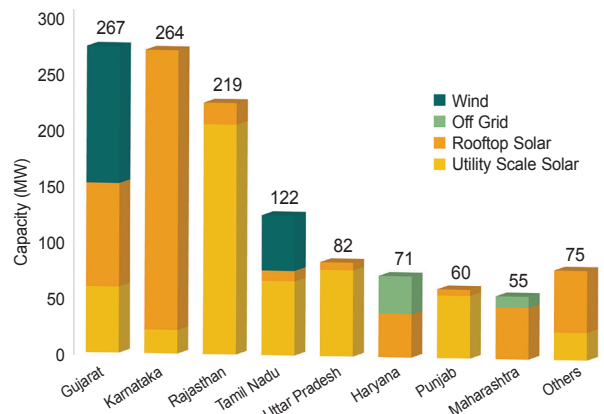

The global smartwatch market bounced by 11.1% YoY, reaching 35 million quarterly shipments. This is a turnaround in three quarters after experiencing a YoY decline in the previous two quarters. While Apple and Samsung saw YoY declines of 10% and 19%, respectively, Huawei and India's top two brands—Noise and Fire Bolt—recorded significant growth. Apple's market share declined from 32% in Q1 2022 to 22% in Q2 2023, while Samsung's market share saw a decline from 10% to 9% during the same period. Huawei maintained a consistent market share, with 7% in Q1 2022 and Q2 2023. By region, India led the overall global gains as it more than offset declines in North America, Europe and the rest of Asia.

India Adds 1,215MW of Solar, Wind Capacity in July 2023

In July 2023, a combined total of 1,215MW of solar and wind capacity was added in India. Karnataka installed the maximum solar capacity of 264MW, with rooftop solar leading the state's energy generation capacity. Rajasthan followed it with 219MW with utility-scale solar leading its energy generation capacity. Gujarat led the overall energy generation capacity with 267MW, of which 148MW was generated through rooftop and utility-scale solar while the remaining 119MW was wind capacity, the highest in the country. The western state was followed by Tamil Nadu with 48MW of wind energy generation capacity.
