

initial public offering (IPO), potentially increasing its valuation significantly.

GlobalFoundries opens \$4B expansion fab in Singapore

GlobalFoundries has opened a \$4 billion expansion fabrication plant in Singapore to meet the increasing demand for semiconductor chips, with a focus on automotive, artificial intelligence, and industrial sectors. The expansion is expected to create about 1,000 high-value jobs in Singapore and significantly increase the company's global manufacturing capacity. GlobalFoundries has had a long partnership with the Singapore government, aligning with the nation's industrial policies to promote high-tech manufacturing. The expansion plans to implement AI tools to improve productivity, including wafer pattern recognition for defect detection.

Mitsubishi Electric Asia, Evercomm partner to achieve carbon neutrality

Mitsubishi Electric Asia has partnered with Singapore-based Evercomm to address challenges in adopting intelligent manufacturing and reduce CO2 emissions, contributing to Singapore's net-zero emissions target by 2050. The partnership will integrate Evercomm's software and Mitsubishi Electric's products to achieve carbon neutrality for customers. Data

consolidation of CO2 emissions and reductions will be managed by Evercomm's software, collecting data from Mitsubishi Electric's SCADA. This union's top three focus areas are employee resistance to technology adoption, lack of requisite skills, and the need to define the value of intelligent manufacturing.

SKC eyes 12% stake in US chip startup

SKC, a South Korean company, is making a significant investment in the US semiconductor packaging startup Chipletz, aiming to secure a stake of approximately 12 percent. This move is part of SKC's strategy to expand its semiconductor post-processing business globally. SKC will leverage its glass substrate production capabilities to collaborate with Chipletz on semiconductor packaging solutions, design technology, and customer network. Chipletz was initially established as an internal venture of AMD in 2016 and became an independent company in 2021. AMD and Taiwan's ASE, a leading semiconductor rear-end processing outsourcing company, are existing shareholders of Chipletz.

US to offer \$12B to aid auto OEMs in EV transition

The US government is offering \$12 billion in grants and loans to incentivise automakers and suppliers to upgrade their manufacturing facilities for EV production, with a focus on ensuring worker and community well-being during this transition. The United Auto Workers (UAW) union has expressed concerns about potential job losses in states like Michigan, Ohio, Illinois, and Indiana due to the rapid shift to EVs. In addition to support for automakers, the US administration is offering \$3.5 billion in funding to domestic battery manufacturers. The funding for advanced vehicle projects includes \$2 billion in grants from the Inflation Reduction Act and \$10 billion in loans from the Energy Department's Loans Program Office.

South Korean industry body, domestic chip firms partner for advanced chip packaging

The South Korean Ministry of Trade, Industry, and Energy has signed a memorandum of understanding (MOU) with Samsung Electronics, SK Hynix, and other chip firms to collaborate on technology development for advanced semiconductor packaging. Signatories to the agreement include LG Chem, several semiconductor assembly and test firms, and fabless companies. The Korean government is emphasising research and development projects in advanced packaging and system semiconductor sectors to establish global market leadership.

lion in the semiconductor industry through its newly approved Assam Electronics (semiconductor, etc) Policy 2023. Chief Minister Himanta Biswa Sarma expressed optimism about securing the investment, even in competition with states like Gujarat and Orissa. The Assam cabinet has approved productivity-linked incentives to encourage chip industry growth. Assam's unique selling point includes its clean water supply from the river Brahmaputra, which is attractive to potential investors.

Nvidia, Reliance Jio Infocomm partner to create AI infra for India

Nvidia and Reliance Industries are collaborating to develop India's own large language model for AI applications. This partnership aims to build powerful AI infrastructure significantly more advanced than India's current fastest supercomputer to support India's industrial growth, especially in areas like agriculture, healthcare, and disaster prediction. Nvidia will provide its advanced

GH200 Grace Hopper Superchip and DGX Cloud for this AI infrastructure. Reliance Jio Infocomm, Reliance Industries' telecom arm, will utilise this AI infrastructure to create AI applications for its 450 million Jio customers. The AI infrastructure will be hosted in AI-ready computing data centres expanding to 2,000MW.

Foxconn eyes setting up third largest EV plant in India

Foxconn Technology Group, the world's largest contract electronics
