

Advanced ALCOHOL BREATH ANALYSER

ROHAN BARNWAL

In today's world, the devastating consequences of accidents caused by drunk driving continue to make headlines. Drawing

inspiration from real-life data, this remarkable advanced alcohol breath analyser has been developed.

This innovation utilises an ar-

ray of components, including the Arduino Uno, Neo 6M GPS module, LEDs, buzzers, OLED display, jumper wires, and breadboard. The primary goal of this project is to revolutionise road safety by proactively preventing accidents resulting

Fig. 1: Author's prototype

BILL OF MATERIALS

Components	Quantity
Arduino Uno (Mod 1)	1
Jumper wires	20
Breadboard	1
MQ3 sensor (S2)	1
NEO 6M GPS module (S1)	1
LEDs (L1, L2, L3, L4)	4
Buzzer (B1, B2)	2
OLED of 0.96-inches (Mod 2)	1
