

DO-IT-YOURSELF: PROJECT

PARTS LIST

Semiconductors:

- Board1 - Arduino board
- LED1 - 5mm LED

Resistor (1/4-watt, $\pm 5\%$ carbon):

- R1 - 470-ohm

Miscellaneous:

- PZ1 - Piezo buzzer
- S1-S9 - Push-to-on switch
- Breadboard
- Jumpers wires
- LCD I2C (RG1602A)

ton switch, while LED1 illuminates during the voting process.

Software

The software for this project is simple and is written in Arduino IDE version 1.8.19. However, it can be adapted for other versions, as it is a straightforward program. Switches S1 to S8 are linked to pins D13, D12, D11, D10, D9, D8, D7, and D6 of the Arduino Uno. Switch S9, connected to pin D5, is responsible for displaying the vote count results on the I2C

LCD screen.

The initial source code is provided below; ensure that you save the sketch as 'Arduino_Code.ino'. Before uploading the program, select the appropriate Arduino Uno board and port. After these selections, upload the 'Arduino_Code.ino' sketch file to the board.

Construction and testing

Once you have uploaded the 'Arduino_Code.ino' source code to the Arduino Uno, assemble the project on a breadboard. Alternatively, you can use a general-purpose PCB for assembly. After wiring the circuit, enclose it in a suitable box, incorporating the Arduino Uno board.

Verify the connections according to the circuit diagram. Apply power to the assembled circuit via the Arduino Uno board. Check the voter count status on the LCD screen. It is

EFY Note
