

Zhejiang NeoDen Technology Co., Ltd. has been manufacturing and exporting various small pick and place machines since 2010. Taking advantage of our own rich experienced R&D, and well-trained production, Neoden wins a great reputation from worldwide customers.

With a global presence in over 130 countries, the excellent performance, high accuracy, and reliability of NeoDen PNP machines make them perfect for RD, professional prototyping, and small to medium batch production. We provide professional solutions for one-stop SMT equipment.

In our global Ecosystem, we collaborate with our best partners to deliver a more closing sales service and highly professional and efficient technical support.

We believe that great people and partners make NeoDen a great company and that our commitment to Innovation, Diversity, and Sustainability ensures that SMT automation is accessible to every hobbyist everywhere.

Neoden YY1 is the Latest Generation of Low cost SMT mounter from, Neoden Technology

Neoden YY1 is a Low cost Desktop SMT Mounter with Two Nozzle and Three Auto Nozzle Changer Option.

103 Feeder Locations, Dual camera Vision System, High Accuracy Placement, Cut Tape/Reel component Pickup, Very User friendly GUI reduces Learning Curve of the Software for any users with even little knowledge in Programming Very well Suited for R & D institutes, Small Scale Production Units, Hobbyists Who are having Most of the components in the form of Cut Reel/Tape form. Decent 315x350+mm board area

Tool changing, which is an essential feature lacking in many low-end machines, 3 + 1 nozzles.

The machine default tape reel feeder setting are total 45pcs(8mm=36pcs,12mm=6pcs,16mm=3pcs), Above feeders support max 12mm height components.

a flying camera option for part vision, as this would improve speed considerably for relatively low cost

Conins Acrylcoat is a high quality flexible transparent ECO FRIENDLY Acrylic Conformal coating for PCB Assemblies.

Conins Acrylcoat is approved by C DOT and it conforms to MIL Standard: MIL - I - 46058C Type AR./ROHS/ G2 G2 G3 COMPLIANCESfiller

Conins Acrylcoat ensures total protection for PCBs and components against moisture, Oxidation, fungus etc., in extremely humid conditions. It is easy to apply and fast drying and has good flexibility.

Servicing is easy as the coating is readily SOLDERABLE.

Acrylcoat has high dielectric strength and it provides protection against high voltage arcing and corona shorts.

Special Features:

- 100% Eco - Friendly
- Economical in use.
- Good Dielectric strength
- Excellent adhesion to all surfaces
- Easily SOLDERABLE ; Servicing is easy.
- Prevents fungus growth
- Protects component leads from corrosion
- Fast curing

RIGOL ECHNOLOGIES

has introduced the new DH0800/900 series 12-bit ultra-portable high resolution oscilloscopes 70MHz-200MHz with 2/4 Channel configuration . Experience incredible performance packed into a sleek, compact design making your measurements effortlessly convenient

- 12 bit vertical resolution with 4096 levels of quantization, 16 times the quantization level of 8 bit, convenient for small signal testing
- Type-C power supply interface which requires only a mobile power supply to supply power to DH0800/DH0900, making field testing possible
- Smart appearance: the series is small in size and supports standard monitor stand installation, which effectively saves desktop space and makes your workbench more spacious
- DH0900S series is equipped with support for Bode diagram loop analysis function as standard, which can effectively deal with the loop response analysis of switching power supply
- A 7" high-definition touch screen is provided, making human-computer interaction more convenient
- All DH0900 series are equipped with standard digital channel and they can be used for digital signal analysis with PLA2216 logic analysis probe
