EV Sales Fall By 55% In June 2023 Post FAME-II Subsidy Revision

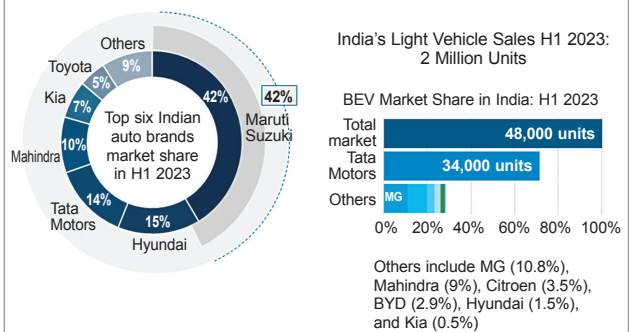

Electric two-wheeler sales in India plummeted by over 55%, to 45,734 units, in June 2023 following a 21% price increase by original equipment manufacturers (OEMs) due to the FAME-II subsidy revision. A JMK Research and Analytics report compared prices of various EV OEMs and highlighted the significant impact of the price hike on sales figures. Notable OEMs and their sales declines due to price hikes included Ola Electric (38% decline), TVS iQube (62% decline), and Bajaj Auto's Chetak (73% decline). The sales impact from the subsidy revision might indicate trends for FY2025 and the cessation of FAME subsidies by March 2024.

YoY EV Sales Grow By 137%

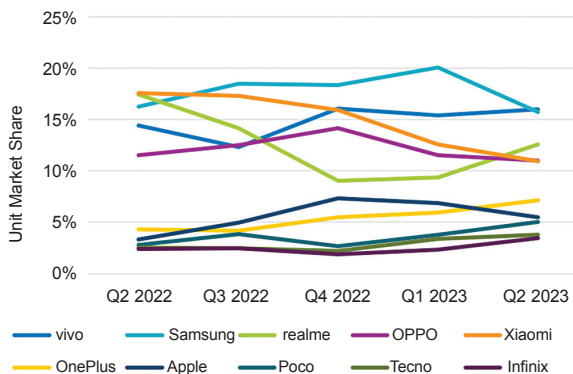

The Indian light vehicle market has experienced a 9.8% growth to 2 million units in H1 2023, with EVs accounting for 2.4% of the market share. The market witnessed a remarkable 137% year-on-year growth in EV sales to 48,000 units. Tata Motors dominated the growing EV market with a 72% share, by selling 34,000 EVs in H1 2023 followed by MG (10%) and Mahindra's XUV 400 (9%). Hyundai's Ioniq 5 and Kia EV6 contributed to a combined market share of over 2%, with plans to launch five distinct EV models by 2032.

Overall Indian Smartphone Market Falls By 10% In 1H23

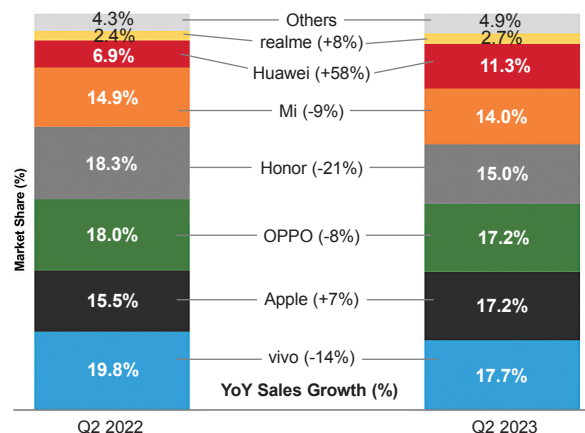

The Indian smartphone market experienced a 10% year-on-year decline in the first half of 2023, shipping 64 million units, as reported by IDC. While the market grew by 10% in the second quarter, it declined by 3% YoY with 34 million units. The average selling price (ASP) declined by 8% QoQ but grew by 13% YoY to reach US\$241 in 2Q23. Shipments through the online channel decreased by 15% YoY, while the offline channel grew by 11%, accounting for a 54% share. Apple's iPhone 13 and OnePlus' Nord CE3 Lite were the top shipped 5G models in 2Q23. Various strategies, including discounts and special schemes, were employed to clear inventory before the upcoming festive season.

China's Smartphone Sales Fall By 4% YoY In Q2

China's smartphone sales dropped by 4% YoY in Q2 2023, hitting the lowest Q2 sales figure since 2014. Sales declined through April and May, with a 25% MoM boost in June attributed to the 618 e-commerce festival, which failed to translate to YoY increase due to a weak performance from June 1 to June 18. Sales of OEMs excluding Apple declined by 5.5% YoY, with major Android OEMs facing YoY declines, except Huawei and realme. Despite positive growth from Apple, Huawei, and realme, overall market sentiment was affected by internal and external macroeconomic factors.
