

# At-a-glance view of key industry trends that can shape the future of your business...

## Global Tablet Shipments Fall By 11%

Global tablet shipments declined by 11% annually in Q2 2023, reaching the lowest volume since Q1 2020. In contrast, Chromebook shipments increased by 1% annually in the same period, after seven consecutive quarters of decline, due to the resurgence of education demand, particularly in North America. Apple maintained its leading position in the tablet market, shipping 12.3 million units and holding nearly two-fifths of the global tablet market share. Samsung recorded a 14% decline in tablet shipments, followed by Amazon (33%) and Lenovo (39%). Huawei shipped the least number of tablets (1.7 million units).

## Global Semiconductor Sales Increase 4.7% QoQ

Global semiconductor sales increased by 4.7% in the second quarter of 2023 compared to the first quarter but were down by 17.3% compared to the same quarter in 2022. A report compiled by the Semiconductor Industry Association (SIA) said that global chip sales increased by 1.7% to \$41.5 billion in June 2023. Regional variations were observed in month-to-month sales: Americas (4.2% increase), China (3.2% increase), Japan (0.9% increase), Europe (0.1% increase), and Asia Pacific/All Other (0.5% decrease). Despite the year-on-year decline, the market shows signs of rebounding, with consistent monthly growth over the second quarter.

## Global Electronics Manufacturing Industry Records Rising Labour Costs

Three-fifths of the global electronics manufacturing industry recorded a 59% increase in labour costs and a 56% hike in material costs, reported IPC. However, the number of companies experiencing rising costs has declined. The majority of manufacturers indicated employee retention this year is comparable to 2022. Roughly 18% indicate retention has been more difficult this year, 18% indicated it has been easier than in 2022, and 55% report it as the same. To hire new employees, 66% of electronics manufacturers have raised salaries/rates beyond what was anticipated, with 54% looking for potential employees in non-traditional places. About 39% have reportedly improved benefits packages to attract new workers.
