- ★ Latest Software & Hardware Technology used, So no fear of Parts Obsolescence.
- ★ 45+ Agencies in Worldwide Provides Local Sales & Services.
- ★ Talented Innovative R&D brings out Outstanding Results.
- ★ TUV Certified.

We cordially Invites You to

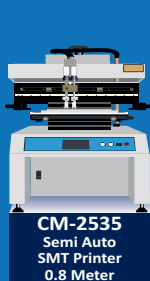

**AUTOMATION
EXPO2022**
15th India International Trade Show
16th to 19th August 2022
BIGGER BETTER STRONGER
BEC, Goregaon (East), Mumbai
Hall No 1
Stall No F-38,39

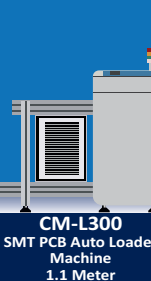

NeoDen N4
SMT Pick & Place
Machine
TUV Certified

NeoDen IN6
SMT Multi Zone Reflow Oven
Very Low Power Desktop
Convection Oven

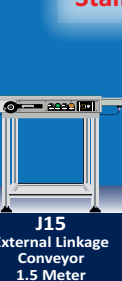

CM-2535
Semi Auto
SMT Printer
0.8 Meter

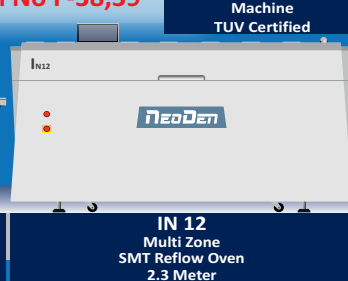

CM-L300
SMT PCB Auto Loader
Machine
1.1 Meter

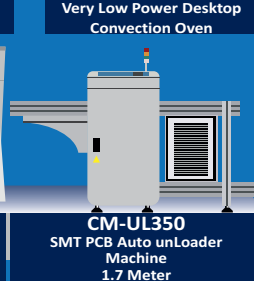

NeoDen N8
SMT Pick & Place
Machine
1.3 Meter

J15
External Linkage
Conveyor
1.5 Meter

IN 12
Multi Zone
SMT Reflow Oven
2.3 Meter

CM-UL350
SMT PCB Auto unLoader
Machine
1.7 Meter

Sole Exclusive Distributor for Sales & Services of NeoDen Products in INDIA

butions, Fedora and CentOS are Red Hat based. Linux Mint, MX Linux, and Ubuntu are Debian based. Thus, the Debian faction looks to have an upper hand these days. Fig. 2 shows the logo of Debian.

GNOME vs KDE Plasma

Let us now focus our attention on desktop environments, which decide the style of the graphical user interface of an operating system. GNOME, KDE Plasma, Xfce, Cinnamon, Unity, MATE, etc, are some of the popular desktop environments for Linux.

The two main competitors fighting for dominance in this sector are GNOME and KDE Plasma. This again is a fiercely ongoing war. GNOME is the default desktop environment for Linux distributions like Ubuntu, Fedora, CentOS, Debian, etc. Linux distributions like Fedora, Kubuntu (Ubuntu with KDE), Manjaro, openSUSE, Gentoo Linux, etc,

have support for KDE Plasma.

I couldn't find any credible method to find out whether GNOME or KDE is more popular. Since GNOME is the default desktop environment of significantly greater number of Linux distributions, it could be considered as having a slight edge over KDE Plasma in this war of

Fig. 3: GNOME logo

desktop environments. Moreover, other popular desktop environments like Cinnamon, MATE, etc, are forks from GNOME. Fig. 3 shows the logo of GNOME.

Editor wars

Unlike many of the previous rival-

ries, which were often motivated by commercial reasons, this is a war fought mainly for technical and philosophical reasons. The editor war is also a fiercely ongoing war for becoming the most popular open source text editor. Some of the popular open source text editors are Emacs, Vi, Atom, gedit, KWrite, GNU nano, etc.

But the editor war that started in the mid-1980s is mainly fought between the supporters of Emacs and Vi. Notice that, nowadays, the Vi editor is replaced with the similar yet more powerful Vim editor.

The mutual criticism of Emacs and Vim has led to the creation of a lot of jokes. For example, the extensible Vi layer for Emacs (which provides some Vi features in Emacs) is called the 'Evil mode.' The supporters of Vim tease the complexity of Emacs by calling it "a great operating system, lacking only a decent editor."
