

Health Sensors for Wearables

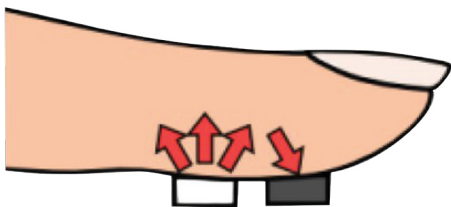

MAXREFDES104

- Measures Heart Rate, SPO2 & Respiration, Analytics (Sleep, Stress), Body Temperature Prediction, A-Fib Detection
- Wrist-worn wearable form factor
- For Health-sensing applications
- Demonstrates features of ADI's Health Sensor Solution

MAX86176

- Works on the principle of Photoplethysmography

- Measures the Heart Rate and Peripheral capillary
- Oxygen Saturation (SPO2)
- Synchronous Acquisition of PPG & ECG Measurement With Independent sample Rates
- 110dB SNR* for Highest Performance SPO2 Measurements

MAX32666 (Host MCU + BLE)

- Low-Power ARM Cortex-M4 with FPU-Based Microcontroller with Bluetooth 5 for Wearables

MAX30208 (I2C Temp Sensor)

±0.1°C Accuracy from +30°C to +50°C

Algorithms

Through the sensor hub (MAX32674) and Android

- Sensor hub: HR, SpO2, IBI, power optimizer
- Android: HRV, sleep monitoring, stress monitoring, respiration rate
- ME15 Flexible as Both Sensor and Algo Hub
- Hypoxia lab – Calibrated Optical Design
