

#5 Points Explaining *astTECS Cloud Telephony for Enterprises

Traditionally, the major objective for having a Business Phone System is to have the freedom to connect within the office without incurring call costs. A PBX phone system, which stands for Private Branch Exchange, is best known as the multi-line framework with extensions used as an intercom (inter-office communication). Over time, the telecommunication system becomes the backbone of an organization of any size.

Nowadays, running an in-house PBX solution, with features more than just intercom, requires substantial infrastructure and good maintenance effort. This also pushes the organization to shell out huge capital costs. Therefore, we can easily see a shift of infrastructure from premise to cloud.

Top #5 characteristics of Organization popularly accepting Cloud Phone Systems:

1. Branch Offices
2. Startups
3. SMEs without in-house IT team
4. SMEs preferring OPEX over CAPEX model
5. Office in Co-Working Spaces

Calling Features mostly used from the Cloud-based Phone Systems:

1. Call Transfer
2. Call Waiting
3. Voice mail
4. Call Recording
5. Music on Hold / Transfer

Cloud PBX companies, like *astTECS, therefore are creating their client niche among the customer who want to run a full-fledged enterprise-level PBX system, without any of the infrastructure liabilities.

Enterprise-level features included in *astTECS Cloud VoIP Phone System:

1. Calling Queues
2. Interactive Voice Response
3. Conference bridge
4. Announcements
5. Ring Groups

With *astTECS cloud telephony, a business can run multiple marketing campaigns such as :

1. Welcome message
 2. Voice blasting
 3. Missed Call campaign
 4. Call Back from Website
 5. ERP / CRM Integration
- And the list goes on....

The Virtual Line from *astTECS based Enterprise Telephony solution allows you to receive incoming calls, play greeting messages in multiple languages, forward calls to unlimited destinations, call conferencing and video conferencing features.

Why choose Cloud over the on-premise solution:

1. Minimized downtime
2. Flexible scaling
3. Easy Setup with minimal time
4. Maintenance Free
5. Enable remote and mobile workforce

Conclusion:

Shifting the data and computation on the cloud has proven beneficial to many organizations, by giving them the ability to go maintenance-free, yet making the scalability & accessibility flexible. Shifting the telephony infrastructure to the cloud could be the major step that can help the companies become 100% digital and handle overall business communication more effectively.
