Molex opens new manufacturing facility in Mexico

Molex has opened a new factory in Guadalajara, Mexico, which is spread across 60,000 square metres and has the potential to increase capacity by another 100,000 square metres. The company has invested \$130 million in this facility that features new tools, technologies, and processes to meet the unprecedented demand for interconnect solutions for tomorrow's electric vehicles (EV), advanced driver assistance systems (ADAS), and connected vehicles.

TI opening new product distribution centre in Germany

Texas Instruments, a global semiconductor company whose presence in Europe dates back to 1956, plans to open a new product distribution centre in Frankfurt, Germany, by the end of 2024. This centre is a response to the company's growing customer base in Europe. The centre in Frankfurt would enable same-day delivery to central Germany and next-day delivery to most European customers.

Infineon planning new semiconductors factory in Dresden

Germany based Infineon Technologies recently released its results for the fourth quarter and for the full fiscal year, both of which ended on 30th September. The report showcased that the company generated a €4.143 billion revenue in fourth quarter of 2022 and €14.218 billion in the entire year 2022. The supervisory board has approved further planning for the construction of a new factory for 300mm analogue/mixed-signal and power semiconductors for about €5 billion in Dresden, Germany.

Indium opens new manufacturing facility in Malaysia

Indium Corporation recently opened its new 3750 square metre manufacturing facility in Penang, Malaysia. This facility will focus on manufacturing solder pastes, thermal interface materials, and solder preforms. It has begun its manufacturing activities and will continue to expand its production capacity to better serve the company's customers in Malaysia and the surrounding region, including Thailand and Vietnam.

Microsoft and HKTDC launch 'Go Beyond Your Limits' programme

The Hong Kong Trade Development Council (HKTDC) and Microsoft Hong Kong have recently entered into a new partnership to launch the 'Go Beyond Your Limits' programme. The two main goals of this programme are promoting SMEs' digitalisation to increase operational efficiency and nurture young talent. HKTDC says the combination of best-in-class technology, practical learning, and comprehensive support programmes will expedite digital transformation and workforce competitiveness of SMEs.

WeaveGrid raises funds to enhance EV software engagement

WeaveGrid, a software company enabling rapid electric vehicle (EV) adoption, recently announced that it has raised \$35 million in Series B funding. The funding is to be used to deepen engagement with automakers while supporting expanded product capabilities for utilities. The company will also enhance driver experience at a critical time for electric vehicles and the power grid. It noted that although government policies are conducive to the rapid expansion of the EV market, there is a parallel transformation required to ensure power grids can handle the increased electric demand.

Veriti raises funds to meet growing consumer demand

The fast-emerging security infrastructure innovator, Veriti, recently announced that it emerged from stealth with \$18.5 million in total funding. The funding round was led by global software investor Insight Partners, which invested \$12 million in the startup. NFX and AMITI also led a \$6.5 million round. The company plans to utilise the new funding to scale and meet its growing customer base, while also enhancing its 'Unified Security Posture Management' platform functionality.

Volve to start making battery modules in Belgium

Volvo has announced that in 2025 the plant in Ghent, Belgium, will start producing battery modules. This investment decision is remarkable as the company shapes its future value chain for battery systems. The battery module manufacturing line in Ghent will be able to use battery cells both from partners and from the planned battery cell plant in Sweden.

Samsung decides to enter the US cable market

At the Mobile World Congress 2022 held at Las Vegas, Samsung Networks signed its first major contract with a US cable operator, agreeing that 5G connectivity will be provided for Comcast across its 600MHz and CBRS spectrum bands. This also includes deploying the new Strand small-cell radio that was specifically developed, along with Comcast, for the cable market.

Analog Devices and AUO introduce local dimming displays

Analog Devices and AUO have teamed up to introduce the industry-first technology that enables local dimming. The system reduces power consumption by a minimum of 50% compared to the traditional edge-lit display. ADI's power portfolio is ASIL-B to -D rated, a critical consideration for many automotive manufacturers that require functional safety features to ensure reliable operation within the vehicle.

are a \$100 million Series D-funded company with \$50 million in ARR.

Comviva partners with Bhubaneswar universities for better talent

Global digital solutions leader Comviva recently signed multiple MoUs with leading technology universities in Bhubaneswar, including Kalinga Institute of Industrial

Technology (KIIT) and Institute of Technical Education & Research (ITER), SOA University, towards a stronger collaboration to drive core technical competencies to develop marketappropriate talent. With the newly-forged partnerships, the company looks forward to enhancing the quality of the talent pool and making them better ready for industry demands.

OFC cable assemblies being indigenised under BEL Make-II

Under the Make-II initiative of Navratna Defence PSU Bharat Electronics Limited (BEL), a Ghaziabad based cable manufacturing company, Riddhi Infratel recently indigenised the OFC cable assemblies used in the Air Defence Radar (AD TCR) of BEL
