

Vertical Sensitivity 100 μ V/div

**Industry Leading
18 μ Vrms Noise Floor**

Bandwidth up to 800MHz

HDO4000 Series High Resolution Digital Oscilloscope

4GSa/s | 12bit | 500Mpts | 1,500,000wfms/s(Ultra Acquire)
10.1 inch Touch Screen | Long Life Photoelectric encoder |
Optional Battery Power 

Benefit

low noise

Industry Leading
18 μ Vrms Noise Floor

Quantized Accuracy

Up to 4096 Quantized
Levels from the A2D
16 $\times$ Quantized Accuracy

Remarkable

Vertical Sensitivity 100 μ V/div

Dual multi- function knob design

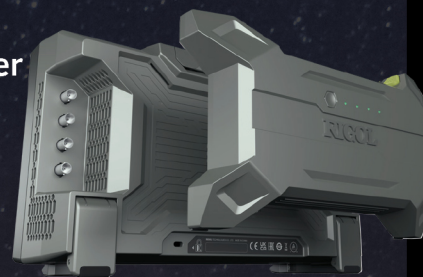

Smart knob, efficient interaction
User Interface dynamically assigns knob functions
based on your needs

4 Digit DVM

High-precision analog signal
conditioning chip
High-precision signal processing chip

Optional Battery Power

Anytime, anywhere,
unlimited measurements

Application

power test

The HDO4000 series provides 12bit vertical resolution, which enables more accurate power test.

low power testing

The HDO4000's high resolution, high sensitivity and low noise can help you effectively capture small current signals in low power testing.

power rail signal

4GSa/s sampling rate, 12bit vertical resolution can help you capture the details of the power rail signal

semiconductor test

The HDO4000 features high resolution and high DC gain accuracy to help you meet your semiconductor test challenges.
