Samsung merges mobile and consumer electronics divisions

Samsung Electronics will be merging its mobile and consumer electronics divisions. Han Jong-hee, who was promoted to vice chairman and co-CEO position, will lead the newly merged divisions and also continue to lead the TV business. Kyung Kye-hyun, CEO of Samsung Electro-Mechanics, was named co-CEO of Samsung Electronics and will lead the chip and components division.

Qualcomm separates Snapdragon into a standalone brand

Qualcomm will no longer produce chips under the brand name Snapdragon. Going forward, Snapdragon will be a standalone product brand with specific ties to the Qualcomm brand where appropriate. The company said it will create a new simplified and consistent naming structure for its platforms and make it easier for customers to discover and choose devices powered by Snapdragon.

Molex acquire's high contactless connectivity IP from Keysaa

US based electronics connectors company Molex has acquired core technology and intellectual property (IP) from Keysaa Inc, a manufacturer of high-speed contactless connectors. Through this acquisition, Molex will be privy to Keysaa's chip-to-chip technology, including over 350 filed patent applications.

Stellantis and Foxconn sign MoU to design flexible automotive chips

Stellantis has signed an MoU with Taiwan's Foxconn to design and sell flexible semiconductors to support the automotive industry. Under this partnership, Stellantis aims to create four new families of chips that will cover over 80% of its semiconductor needs. These semiconductors will be utilised within the Foxconn EV ecosystem as Foxconn continues to extend its capabilities in electric vehicle manufacturing.

TSMC begins production of 3nm chips at its Fab18

Taiwan Semiconductor Manufacturing Company (TSMC) has begun pilot production of 3-nanometer chips and expects to start producing them in volume by the end of 2022. TSMC had begun the installation of the 3nm chip manufacturing facilities in its Fab 18 located in Tainan, Taiwan earlier in 2021.

GaN Systems raises \$150 million in funding

Canadian power chipmaker GaN Systems has raised \$150 million in a funding round led by Fidelity to accelerate innova-

tion and adoption of GaN technology across its automotive, consumer, industrial, and enterprise markets. The company will use the investment to fuel the rapid market penetration of GaN as global power electronics companies shift from legacy silicon devices to unlock the value of small, low-cost, efficient power systems.

Nissan to invest \$17.6 billion for electrification of fleet

Nissan Motor Co. Ltd has announced that it will be investing \$17.6 billion over the next five years to accelerate electrification of its vehicle lineup and rate of technology innovation, adding that it aims half its global sales to be electric or hybrid vehicles by 2030. The company said it will introduce 23 electrified vehicles that use a range of technologies using electricity for propulsion by 2030, including 15 electric vehicles.

Syntronixs Asia becomes part of Infineon (Malaysia)

Infineon Technologies (Malaysia) has acquired Syntronixs Asia, a Melaka based electroplating company. Founded in 2006, Syntronixs Asia has a workforce of more than 500 people and has been a major service provider for Infineon since 2009.

Texas Instruments to begin construction of new fabrication plants

Texas Instruments Inc plans to begin construction of its new 300mm semiconductor wafer fabrication plants in Sherman, Texas soon. Construction of the first and second fabs is set to begin in 2022. The North Texas site has the potential for up to four fabs to meet demand over time.

Mouser now distributing Fujitsu semiconductor memory products

Mouser Electronics announced that it is now distributing ferroelectric random access memory (FRAM) and large-density resistive random access memory (ReRAM) products from Fujitsu Semiconductor Memory Solution. Fujitsu Semiconductor Memory Solution is a subsidiary of Fujitsu Semiconductor.

Honda Motor establishes battery sharing service subsidiary in India

Honda Motor has set up a battery sharing service subsidiary in India—Honda Power Pack Energy India Pvt Ltd. It is planned to start battery sharing service for electric auto rickshaws from the first half of 2022 in Bengaluru, Karnataka and expand the operations to other Indian cities in a phased manner.

Over 10-year old diesel cars permitted after retrofitting in Delhi

The Delhi government will allow diesel cars older than ten years to be used on Delhi's roads but only after they have been retrofitted with electric kits. Delhi's transport department will empanel manufacturers of pure electric kits by approved testing agencies.

Goa Electric Mobility Promotion Policy 2021 gets approval

The Goa state government has approved the Goa Electric Mobility Promotion Policy 2021. The objective of the policy is to boost adoption of electric vehicles (EVs) to at least 30% by 2025 and aims to create 10,000 direct and indirect jobs in the sector by then.

Plots allotted at Goa's electronics manufacturing cluster

Three companies have been allotted plots at Goa's Tuem electronics manufacturing cluster (EMC) by the state government to set up manufacturing units. Plots have been allotted to Samanvii Digimedia Arts and Solutions Pvt Ltd, Tangentia India Technologies (Pvt) Ltd, and Kenkre Generators Sales and Services.
