

residue can be removed by using only a warm water-wash. The halogen-free CW-305 cleans so well that residue

removal can be delayed for up to 48 hours without affecting ionic cleanliness or visual circuit

board appearance. It is beneficial for electrical hand soldering applications where high flux strength and the ability to clean with water are required, such as touch-up and rework applications for medical, aerospace, and automotive industries. It is also capable of soldering heavily tarnished surfaces.

Low-viscosity gap filler

The GF600 is a two-part, liquid silicone based gap filler, which provides excellent thermal performance and

can be cured at room temperature or accelerated with heat. After curing, GF600 forms a

low modulus elastomer, preventing the 'pump-out' phenomenon. The low-viscosity gap filler is easy to dispense and is soft and compliant for low stress applications. With extremely high thermal conductivity of 6.0W/m.K and a wide operating temperature range of -50 to 200°C, the flame-retardant GF600 is ideally suited to filling gaps and air voids, even in the most delicate of devices, with minimal stress.

ENTERPRISE CLASS

Touch monitors

The ARC series of ruggedised touch monitors with a wide-screen 16:9 ratio offer a variety of sizes, brightness, and resolution options. All monitors feature front IP65 protection and a wide

operating temperature range from -10 to 50°C and many more options. Principally designed for industrial applications, such as factory automation interfaces, the monitors can withstand harsh operating environments, while also being suitable for work outdoor or public use-cases, such as digital signage, transportation, vending machines, kiosks, ATMs, intercoms, and more.

AI-enabled router

The R15 EAGLE PRO AI AX1500 smart router combines the latest Wi-Fi 6 technology with artificial intelligence to offer incredible Wi-Fi

coverage and speed, delivering a continuously optimised and improved network, ideal for home users and small offices.

It is packed with cutting-edge AI features to keep everyone connected, no matter what they are doing online. This advanced router brings AI-enhanced capabilities to optimise the Wi-Fi, keeping network performance at peak, and allowing users to experience the convenience of AI-powered Wi-Fi Network.

Portable air monitor

The Honeywell Transmission Risk Air Monitor is an easy-to-deploy, portable device that measures carbon dioxide and alerts users when indoor air conditions may present an increased risk of

potentially transmitting airborne viruses in schools, restaurants, and other spaces. This helps customers be aware of when to proactively improve indoor air quality and reduce the spread of certain diseases and decrease the risk of exposure among building occupants. The new monitor

incorporates an easy-to-read digital display, a rechargeable battery and is Bluetooth plus WiFi-enabled to allow for connectivity between the device and its mobile application and online dashboard.

People-counting solution

The ADI EagleEye ADSW4000 PeopleCount algorithm in EVAL-AD-SW4000KTZ, or ADI EagleEye trial kit, is beneficial for people detection and

count in indoor spaces, such as meeting rooms or office cubicles. The ADSW4000 is the first in a series of

application-level software algorithms forming part of the ADI EagleEye platform that includes a hardware subsystem based on ADI's Blackfin embedded digital signal processor and a set of application-level software building blocks enabling users to quickly develop their own people-counting system to improve space utilisation, people safety through distance monitoring, and energy efficiency of spaces within intelligent buildings.

Compact LED lighting solution

The innovative Groove LED surface light is a compact and practical

lighting option for modern Indian homes, offices, and other commercial spaces. Groove LED is a slim, rimless, and compact

surface mounting LED that is one of the most user-friendly LED models. It has been designed with an integrated driver and is an energy-saving and eco-friendly option that is available in different watt variants. Groove is the ideal choice for modern homes, hotels, shops, and offices.
