

INDUSTRY-ACADEMIA GAP Is Hurting Electronics Industry

The electronics industry has become a strategic sector with tremendous economic impact, but it is totally dependent on imports as of now. Despite blooming demand in the domestic market, India lags in manufacturing compared to other developed countries. How can this be resolved and what is the reason behind this? Let us find out

ABBINAYA KUZHANTHAIVEL

Electronics is one of the fastest growing industries in the world. In spite of having excellent academic institutions teaching electronics, India lags in manufacture of electronic goods. This leads to import of electronic components as well as most finished products.

As a country, we have heavily relied on China, the US, and some other countries for raw materials, technology, and intermediary goods. Though manufac-

ture of some key electronic products and other necessary electrical equipment may not be possible soon, India can begin producing less sophisticated components—provided certain measures are taken.

Innovation drives self-reliance

Innovation does not take place overnight but needs a strong support system to drive it. We need an ecosystem to push and channelise our talent, nurture, and facilitate it. For that the right mindset and
