

SEMICONDUCTOR & DISPLAY FABS: Devil Is In The Execution SUCCESS In COLLABORATION

The government of India has come up with a 760 billion rupee layout plan for semiconductor and display fabs. How do the industry heavyweights perceive this plan? What are they doing to be successful, and what's their advice for smaller companies?

A tweet “Intel-Welcome to India” posted by India’s IT Minister Ashwini Vaishnaw sent ripples down the core of the semiconductor ecosystem of the world. This tweet was a result of Intel’s Foundry Services president Randhir Thakur praising the government of India for the recently announced 760 billion rupee India Semiconductor Program. The aim of the Program, similar to the National Electronics Policy and every scheme announced under it, is to make India the hub of semiconductor manufacturing. The Program attempts to set up a semiconductor as well as display

manufacturing ecosystem in India.

India currently depends fully on imports for meeting its semiconductor needs, but that has been said a thousand times before. What’s different this time is the intent, and the list of leaders and India based corporate houses joining the struggle to set up a semiconductor and display base in the country. Their aim is the same, and they all want to make sure that India does not miss the bus of semiconductor manufacturing once again.

“The recently announced comprehensive program for the development of sustainable electronics and display ecosystem in the coun-
