Silicon Carbide Power Solutions

Adopt SiC With Ease, Speed and Confidence

The global Silicon Carbide (SiC) market is growing fast; stay ahead of the curve with Microchip. Our industry-leading portfolio of SiC power solutions delivers the lowest system cost, fastest time to market and lowest risk.

The unrivaled ruggedness and performance of our products eliminates the need for device redundancy and free-wheeling diodes, reducing component count and allowing you to develop smaller, lighter and less expensive applications. Our digital gate drivers and comprehensive system solutions cut development times by up to six months, accelerating your designs to market—and revenue—at full speed.

Moreover, our dual-fab strategy and multi-source epi wafer supply allows us to deliver SiC power devices to our customers in 8 to 20 weeks, beating competitor lead times by a year or more. Not only can we provide the SiC products you want now, our client-driven obsolescence practice ensures we'll continue to supply the products you need for as long as you need them.

- Extremely low switching losses to improve system efficiency
- High power density for smaller footprint to reduce size and weight
- Three times more thermally conductive than silicon
- Reduced sink requirements to achieve smaller size and lighter weight
- High-temperature operation to improve reliability at increased power density
