

NEODEN INDIA

Auto SMT Pick & Place Assembly Line

www.neodentech.eu : Europe
 www.neodenusa.com : USA
 www.emlogic.com.au : Australia
 www.smtturkey.com : Turkey

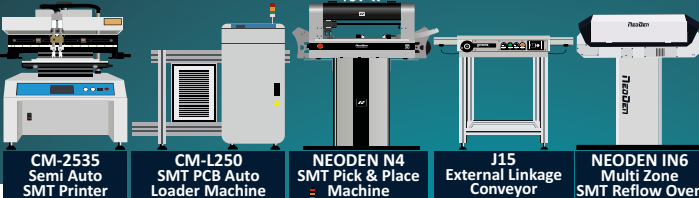

- ★ Latest Software & Hardware Technology used, So no fear of Parts Obsolescence.
- ★ 45+ Agencies in worldwide Provides Local Sales & Services.
- ★ Talented Innovative R&D brings out Outstanding Results.
- ★ TUV Certified.

NEODEN YY1 LOW COST DESKTOP SMT MOUNTER

Neoden
Recommended Desktop Version of Automatic SMT Pick & Place Production Line

Neoden
Recommended Vertical Standalone Version of Automatic SMT Pick & Place Production Line

Sole Exclusive Distributor For Sales & Services of
Neoden Products in **INDIA**

expertise to make it market-ready.

The technical expertise available in our country is top-class and we need to give them some time to work on the rough edges of the BMS design. I feel in another six months the battery problem will be behind us and we will see more 2-wheeler EVs on the road.

Is the problem in software or is it in understanding the electronics involved in BMS? Where do you think is the weak spot which companies need to overcome?

A few years back, mobile phone batteries were known to explode. But over time, the software of the phone was designed in a way it could cut off batteries automatically, if overcharged.

Similarly, EV battery manufacturers should develop their own in-house system to develop a robust BMS by conducting extensive tests

to come up with an optimal solution for EV 2-wheelers.

A collaboration of battery manufacturers with the electronic designers is needed to overcome the current problem. The next problem will be planning the supply-chain for lithium batteries as these have to be imported.

Is the market for 3-wheeler segment also like the 2-wheeler?

The electric 3-wheeler market in India is largely unorganised and fragmented. India will be the largest driver in the 3-wheeler landscape. With established and known OEMs getting into this segment we will see a robust 3-wheeler EV market in next one or two years. The cargo segment will see a bigger boom.

How do you see the EV chargers' market in India?

It's a chicken and egg situation.

Without proper charging infrastructure, the rate of EV adoption won't increase. The basic problem right now is the need for charging infrastructure. There is no clarity with respect to per unit cost, the land acquisition cost, or locations where the chargers can be installed. There is doubt related to optimum returns as the setup cost is too high. The government has given incentives in terms of GST reduction, but more private players need to participate.

Do you see an opportunity for Indian companies designing low-cost indigenous chargers?

For 2-wheelers and 3-wheelers, yes, definitely we can do that. Work is being done in that area already. For the 2-wheeler EV market, India will be the flagbearer because we have the volumes. India also has a lot of talent pool to develop an indigenous EV charger.
