Increase in EV prices push away potential UK and US buyers

As per a survey, 66% of the UK and 61% of the US respondents are not keen on adopting electric vehicles because of the high purchase price. Currently, only 5% of the UK and the US residents use an electric vehicle, with Tesla proving the most popular. The integration of electric fleet vehicles within the MaaS (mobility-as-a-service) solutions key could help improve user familiarity.

Intel quantum chip production hits major milestone

The Intel Labs and Components Research recently announced that they achieved the industry's highest reported yield and uniformity to date of silicon spin qubit devices. It was developed at Intel's transistor research and development facility, Gordon Moore Park at Ronler Acres in Hillsboro, Oregon. The company is said to showcase the full results of this research at the 2022 Silicon Quantum Electronics Workshop in Orford, Québec, Canada.

onsemi sets up a new design centre at Bucharest for ICs

The new centre announced by onsemi encompasses the entire new-product development cycle. This 3000 square-metre design centre in Bucharest, Romania is for semiconductor chips.

With hi-tech laboratories intended for high temperature and high endurance use, isolated drivers for automotive applications and high precision parts for intelligent sensing, it is located at The Light One campus with more than 100 employees working at the location.

Molex expands manufacturing operations in Hanoi

Molex recently announced its manufacturing operations expansion in Hanoi. As per the statement, a new 16,000 square

metre facility is being added to the existing installation, which will bring around 200 new job opportunities in the advanced high-tech manufacturing sector. The new facility is laced with solar installation in order to reduce the organisation's carbon footprint.

Würth Elektronik partners with CELUS for engineering platform

Würth Elektronik has now partnered with CELUS Engineering Platform to become a component partner to the latter's engineering platform. This collaboration strengthens CELUS' capabilities in automating the creation of electronic designs. CELUS digital ecosystem provides significant business advantages to component manufacturers by enabling them to reach their end customers.

STMicroelectronics to manufacture SiC substrate in Italy

STMicroelectronics recently announced that it will open an integrated silicon carbide (SiC) substrate manufacturing facility in Italy. The company is developing the facility at ST's Catania site, where production is expected to begin next year. The official statement termed it a key step in advancing ST's vertical integration strategy for its SiC business. It believes that the increasing demand will be supported across automotive and industrial applications as they transition to electrification and seek higher efficiency.

Vicor launches Powering Innovation podcasts

Vicor recently launched Powering Innovation podcasts that aims to share insights and expert opinions from today's most innovative companies. The podcasts explore the role power electronics plays in unlocking breakthrough solutions to real-world problems, said the official statement. Commenced on October 12, this podcast targets a range of audiences, including systems, electronics design and development engineers. It can be downloaded from all major podcast providers like Spotify, Apple Music, and Google Podcasts.

Tech Mahindra opens a telco smart analytics lab in the UK

Tech Mahindra recently announced its dedicated Google Cloud Telco Smart Analytics Lab in Milton Keynes, UK. As per the official statement released, the lab will harness the advanced Google Cloud analytics capabilities and infrastructure to accelerate data-driven digital transformation journeys for various clients.

1Verse launches first metaverse based EV dealership

1Verse claims to be the first company to deliver meta-world and real-world shopping seamlessly and at scale in India. The dealership, which has been launched through a newly formed subsidiary, will sell two- and three-wheeler EVs throughout India. The company opines that since hundreds

of millions of consumers in Asia and Africa rely on lighter vehicles, this is the most important market for achieving a transition from fossil fuels to EVs.

Hero Electric, Okinawa receive notices to support subsidy claims

Notices from the Ministry of Heavy Industries (MHI) have been sent out to EV makers Hero Electric and Okinawa to ascertain the components

being used are locally sourced. This is being done as the companies avail the 1000-billion-rupee Faster Adoption and Manufacturing of Electric and Hybrid Vehicles (FAME)-II benefits. Major EV makers like Hero Electric and Okinawa have been asked to show documents supporting their subsidy claims. Some other firms are also now under the scanner. An audit is to be conducted to check if the supplies meet the requirements of the FAME-II scheme.
